# PART 4—SCHEDULE FOR RATING DISABILITIES

#### Subpart A—General Policy in Rating

#### Sec.

Pt. 4

- 4.1 Essentials of evaluative rating.
- 4.2 Interpretation of examination reports.
- 4.3 Resolution of reasonable doubt.
- 4.6 Evaluation of evidence.
- 4.7 Higher of two evaluations.
- 4.9 Congenital or developmental defects.
- 4.10 Functional impairment.
- 4.13 Effect of change of diagnosis.
- 4.14 Avoidance of pyramiding.
- 4.15 Total disability ratings.
- 4.16 Total disability ratings for compensation based on unemployability of the individual.
- 4.17 Total disability ratings for pension based on unemployability and age of the individual.
- 4.17a Misconduct etiology.
- 4.18 Unemployability.
- 4.19  $\,$  Age in service-connected claims.
- 4.20 Analogous ratings.
- 4.21 Application of rating schedule.
- 4.22 Rating of disabilities aggravated by active service.
- 4.23 Attitude of rating officers.
- 4.24 Correspondence.
- 4.25 Combined ratings table.
- 4.26 Bilateral factor.
- 4.27 Use of diagnostic code numbers.
- 4.28 Prestabilization rating from date of discharge from service.
- 4.29 Ratings for service-connected disabilities requiring hospital treatment or observation.
- 4.30 Convalescent ratings.
- 4.31 Zero percent evaluations.

#### Subpart B—Disability Ratings

## THE MUSCULOSKELETAL SYSTEM

- 4.40 Functional loss.
- 4.41 History of injury.
- 4.42 Complete medical examination of injury cases.
- 4.43 Osteomyelitis.
- 4.44 The bones.
- 4.45 The joints.
- 4.46 Accurate measurement.
- 4.47-4.54 [Reserved]
- 4.55 Principles of combined ratings for muscle injuries.
- 4.56 Evaluation of muscle disabilities.
- 4.57 Static foot deformities.
- 4.58 Arthritis due to strain.

- 4.59 Painful motion.
- 4.60 [Reserved]
- 4.61 Examination.
- 4.62 Circulatory disturbances.
- 4.63 Loss of use of hand or foot.
- 4.64 Loss of use of both buttocks.
- 4.65 [Reserved]
- 4.66 Sacroiliac joint.
- 4.67 Pelvic bones.
- 4.68 Amputation rule.
- 4.69 Dominant hand.
- 4.70 Inadequate examinations.
- 4.71 Measurement of ankylosis and joint motion.
- 4.71a Schedule of ratings—musculoskeletal system.
- 4.72 [Reserved]
- 4.73 Schedule of ratings—muscle injuries.

#### THE ORGANS OF SPECIAL SENSE

- 4.75 General considerations for evaluating visual impairment.
- 4.76 Visual acuity.
- 4.76a Computation of average concentric contraction of visual fields.
- 4.77 Visual fields.
- 4.78 Muscle function.
- 4.79 Schedule of ratings—eye.
- 4.80-4.84 [Reserved]

#### IMPAIRMENT OF AUDITORY ACUITY

- 4.85 Evaluation of hearing impairment.
- 4.86 Exceptional patterns of hearing impairment.
- 4.87 Schedule of ratings—ear.
- 4.87a Schedule of ratings—other sense organs.

# INFECTIOUS DISEASES, IMMUNE DISORDERS AND NUTRITIONAL DEFICIENCIES

- 4.88 [Reserved]
- 4.88a Chronic fatigue syndrome.
- 4.88b Schedule of ratings—infectious diseases, immune disorders and nutritional deficiencies.
- 4.88c Ratings for inactive nonpulmonary tuberculosis initially entitled after August 19, 1968.
- 4.89 Ratings for inactive nonpulmonary tuberculosis in effect on August 19, 1968.

#### THE RESPIRATORY SYSTEM

- 4.96 Special provisions regarding evaluation of respiratory conditions.
- 4.97 Schedule of ratings—respiratory system.

#### THE CARDIOVASCULAR SYSTEM

- 4.100 Application of the general rating formula for diseases of the heart.
- 4.101-4.103 [Reserved]
- 4.104 Schedule of ratings—cardiovascular system.

#### THE DIGESTIVE SYSTEM

4.110 Ulcers.

#### 408

- 4.111 Postgastrectomy syndromes.
- 4.112 Weight loss.
- 4.113 Coexisting abdominal conditions.
- 4.114 Schedule of ratings—digestive system.

#### THE GENITOURINARY SYSTEM

- 4.115 Nephritis.
- 4.115a Ratings of the genitourinary system—dysfunctions.
- 4.115b Ratings of the genitourinary system—diagnoses.

# GYNECOLOGICAL CONDITIONS AND DISORDERS OF THE BREAST

4.116 Schedule of ratings—gynecological conditions and disorders of the breast.

THE HEMATOLOGIC AND LYMPHATIC SYSTEMS

4.117 Schedule of ratings—hemic and lymphatic systems.

#### THE SKIN

4.118 Schedule of ratings—skin.

#### THE ENDOCRINE SYSTEM

4.119 Schedule of ratings—endocrine system

# NEUROLOGICAL CONDITIONS AND CONVULSIVE DISORDERS

- 4.120 Evaluations by comparison.
- 4.121 Identification of epilepsy.
- 4.122 Psychomotor epilepsy.
- 4.123 Neuritis, cranial or peripheral.
- 4.124 Neuralgia, cranial or peripheral.
- 4.124a Schedule of ratings—neurological conditions and convulsive disorders.

#### MENTAL DISORDERS

- 4.125 Diagnosis of mental disorders.
- 4.126 Evaluation of disability from mental disorders.
- 4.127 Intellectual disability (intellectual developmental disorder) and personality disorders.
- 4.128 Convalescence ratings following extended hospitalization.
- 4.129 Mental disorders due to traumatic stress.
- 4.130 Schedule of ratings—Mental disorders.

#### DENTAL AND ORAL CONDITIONS

- 4.149 [Reserved]
- 4.150 Schedule of ratings—dental and oral conditions.
- APPENDIX A TO PART 4—TABLE OF AMEND-MENTS AND EFFECTIVE DATES SINCE 1946
- APPENDIX B TO PART 4—NUMERICAL INDEX OF DISABILITIES APPENDIX C TO PART 4—ALPHABETICAL INDEX
- OF DISABILITIES

AUTHORITY: 38 U.S.C. 1155, unless otherwise noted.

SOURCE: 29 FR 6718, May 22, 1964, unless otherwise noted.

# Subpart A—General Policy in Rating

#### § 4.1 Essentials of evaluative rating.

This rating schedule is primarily a guide in the evaluation of disability resulting from all types of diseases and injuries encountered as a result of or incident to military service. The percentage ratings represent as far as can practicably be determined the average impairment in earning capacity resulting from such diseases and injuries and their residual conditions in civil occupations. Generally, the degrees of disability specified are considered adequate to compensate for considerable loss of working time from exacerbations or illnesses proportionate to the severity of the several grades of disability. For the application of this schedule, accurate and fully descriptive medical examinations are required, with emphasis upon the limitation of activity imposed by the dis-abling condition. Over a period of many years, a veteran's disability claim may require reratings in accordance with changes in laws, medical knowledge and his or her physical or mental condition. It is thus essential, both in the examination and in the evaluation of disability, that each disability be viewed in relation to its history.

[41 FR 11292, Mar. 18, 1976]

# § 4.2 Interpretation of examination reports.

Different examiners, at different times, will not describe the same disability in the same language. Features of the disability which must have persisted unchanged may be overlooked or a change for the better or worse may not be accurately appreciated or described. It is the responsibility of the rating specialist to interpret reports of examination in the light of the whole recorded history, reconciling the various reports into a consistent picture so that the current rating may accurately reflect the elements of disability present. Each disability must be considered from the point of view of the veteran working or seeking work. If a

#### §4.3

diagnosis is not supported by the findings on the examination report or if the report does not contain sufficient detail, it is incumbent upon the rating board to return the report as inadequate for evaluation purposes.

[41 FR 11292, Mar. 18, 1976]

#### §4.3 Resolution of reasonable doubt.

It is the defined and consistently applied policy of the Department of Veterans Affairs to administer the law under a broad interpretation, consistent, however, with the facts shown in every case. When after careful consideration of all procurable and assembled data, a reasonable doubt arises regarding the degree of disability such doubt will be resolved in favor of the claimant. See §3.102 of this chapter.

[40 FR 42535, Sept. 15, 1975]

#### § 4.6 Evaluation of evidence.

The element of the weight to be accorded the character of the veteran's service is but one factor entering into the considerations of the rating boards in arriving at determinations of the evaluation of disability. Every element in any way affecting the probative value to be assigned to the evidence in each individual claim must be thoroughly and conscientiously studied by each member of the rating board in the light of the established policies of the Department of Veterans Affairs to the end that decisions will be equitable and just as contemplated by the requirements of the law.

#### § 4.7 Higher of two evaluations.

Where there is a question as to which of two evaluations shall be applied, the higher evaluation will be assigned if the disability picture more nearly approximates the criteria required for that rating. Otherwise, the lower rating will be assigned.

# § 4.9 Congenital or developmental defects.

Mere congenital or developmental defects, absent, displaced or supernumerary parts, refractive error of the eye, personality disorder and mental deficiency are not diseases or injuries in the meaning of applicable legisla-

tion for disability compensation purposes.

[41 FR 11292, Mar. 18, 1976]

#### §4.10 Functional impairment.

The basis of disability evaluations is the ability of the body as a whole, or of the psyche, or of a system or organ of the body to function under the ordinary conditions of daily life including employment. Whether the upper or lower extremities, the back or abdominal wall, the eyes or ears, or the cardiovascular, digestive, or other system, or psyche are affected, evaluations are based upon lack of usefulness, of these parts or systems, especially in self-support. This imposes upon the medical examiner the responsibility of furnishing, in addition to the etiological, anatomical, pathological, laboratory and prognostic data required for ordinary medical classification, full description of the effects of disability upon the person's ordinary activity. In this connection, it will be remembered that a person may be too disabled to engage in employment although he or she is up and about and fairly comfortable at home or upon limited activ-

 $[41~{\rm FR}~11292,\,{\rm Mar.}~18,\,1976]$ 

#### § 4.13 Effect of change of diagnosis.

The repercussion upon a current rating of service connection when change is made of a previously assigned diagnosis or etiology must be kept in mind. The aim should be the reconciliation and continuance of the diagnosis or etiology upon which service connection for the disability had been granted. The relevant principle enunciated in §4.125, entitled "Diagnosis of mental disorders," should have careful attention in this connection. When any change in evaluation is to be made, the rating agency should assure itself that there has been an actual change in the conditions, for better or worse, and not merely a difference in thoroughness of the examination or in use of descriptive terms. This will not, of course, preclude the correction of erroneous ratings, nor will it preclude assignment of a rating in conformity with §4.7.

[29 FR 6718, May 22, 1964, as amended at 61 FR 52700, Oct. 8, 1996]

#### §4.14 Avoidance of pyramiding.

The evaluation of the same disability under various diagnoses is to be avoided. Disability from injuries to the muscles, nerves, and joints of an extremity may overlap to a great extent, so that special rules are included in the appropriate bodily system for their evaluation. Dyspnea, tachycardia, nervousness, fatigability, etc., may result from many causes; some may be service connected, others, not. Both the use of manifestations not resulting from service-connected disease or injury in establishing the service-connected evaluation, and the evaluation of the same manifestation under different diagnoses are to be avoided.

#### § 4.15 Total disability ratings.

The ability to overcome the handicap of disability varies widely among individuals. The rating, however, is based primarily upon the average impairment in earning capacity, that is, upon the economic or industrial handicap which must be overcome and not from individual success in overcoming it. However, full consideration must be given to unusual physical or mental effects in individual cases, to peculiar effects of occupational activities, to defects in physical or mental endowment preventing the usual amount of success in overcoming the handicap of disability and to the effect of combinations of disability. Total disability will be considered to exist when there is present any impairment of mind or body which is sufficient to render it impossible for the average person to follow a substantially gainful occupation; Provided, That permanent total disability shall be taken to exist when the impairment is reasonably certain to continue throughout the life of the disabled person. The following will be considered to be permanent total disability: the permanent loss of the use of both hands, or of both feet, or of one hand and one foot, or of the sight of both eyes, or becoming permanently helpless or permanently bedridden. Other total disability ratings are scheduled in the various bodily systems of this schedule.

# §4.16 Total disability ratings for compensation based on unemployability of the individual.

(a) Total disability ratings for compensation may be assigned, where the schedular rating is less than total, when the disabled person is, in the judgment of the rating agency, unable to secure or follow a substantially gainful occupation as a result of service-connected disabilities: Provided That, if there is only one such disability, this disability shall be ratable at 60 percent or more, and that, if there are two or more disabilities, there shall be at least one disability ratable at 40 percent or more, and sufficient additional disability to bring the combined rating to 70 percent or more. For the above purpose of one 60 percent disability, or one 40 percent disability in combination, the following will be considered as one disability: (1) Disabilities of one or both upper extremities, or of one or both lower extremities, including the bilateral factor, if applicable. (2) disabilities resulting from common etiology or a single accident, (3) disabilities affecting a single body system, e.g. orthopedic, digestive, respiratory, cardiovascular-renal, neuropsychiatric, (4) multiple injuries incurred in action, or (5) multiple disabilities incurred as a prisoner of war. It is provided further that the existence or degree of nonservice-connected previous disabilities orunemployability status will be disregarded where the percentages referred to in this paragraph for the service-connected disability or disabilities are met and in the judgment of the rating agency such service-connected disabilities render the veteran unemployable. Marginal employment shall not be considered substantially gainful employment. For purposes of this section, marginal employment generally shall be deemed to exist when a veteran's earned annual income does not exceed the amount established by the U.S. Department of Commerce, Bureau of the Census, as the poverty threshold for one person. Marginal employment may also be held to exist, on a facts found basis (includes but is not limited to employment in a protected environment such as a family business or sheltered workshop), when earned annual

#### §4.17

income exceeds the poverty threshold. Consideration shall be given in all claims to the nature of the employment and the reason for termination.

(Authority: 38 U.S.C. 501)

(b) It is the established policy of the Department of Veterans Affairs that all veterans who are unable to secure and follow a substantially gainful occupation by reason of service-connected disabilities shall be rated totally disabled. Therefore, rating boards should submit to the Director, Compensation Service, for extra-schedular consideration all cases of veterans who are unemployable by reason of service-connected disabilities, but who fail to meet the percentage standards set forth in paragraph (a) of this section. The rating board will include a full statement as to the veteran's serviceconnected disabilities, employment history, educational and vocational attainment and all other factors having a bearing on the issue.

[40 FR 42535, Sept. 15, 1975, as amended at 54 FR 4281, Jan. 30, 1989; 55 FR 31580, Aug. 3, 1990; 58 FR 39664, July 26, 1993; 61 FR 52700, Oct. 8, 1996; 79 FR 2100, Jan. 13, 2014]

# § 4.17 Total disability ratings for pension based on unemployability and age of the individual.

All veterans who are basically eligible and who are unable to secure and follow a substantially gainful occupation by reason of disabilities which are likely to be permanent shall be rated as permanently and totally disabled. For the purpose of pension, the permanence of the percentage requirements of §4.16 is a requisite. When the percentage requirements are met, and the disabilities involved are of a permanent nature, a rating of permanent and total disability will be assigned if the veteran is found to be unable to secure and follow substantially gainful employment by reason of such disability. Prior employment or unemployment status is immaterial if in the judgment of the rating board the veteran's disabilities render him or her unemployable. In making such determinations, the following guidelines will be used:

(a) Marginal employment, for example, as a self-employed farmer or other person, while employed in his or her

own business, or at odd jobs or while employed at less than half the usual remuneration will not be considered incompatible with a determination of unemployability, if the restriction, as to securing or retaining better employment, is due to disability.

(b) Claims of all veterans who fail to meet the percentage standards but who meet the basic entitlement criteria and are unemployable, will be referred by the rating board to the Veterans Service Center Manager or the Pension Management Center Manager under §3.321(b)(2) of this chapter.

(Authority: 38 U.S.C. 1155; 38 U.S.C. 3102)

[43 FR 45348, Oct. 2, 1978, as amended at 56 FR 57985, Nov. 15, 1991; 71 FR 28586, May 17, 2006; 74 FR 26959, June 5, 2009]

#### §4.17a Misconduct etiology.

A permanent and total disability rating under the provisions of §§ 4.15, 4.16 and 4.17 will not be precluded by reason of the coexistence of misconduct disability when:

- (a) A veteran, regardless of employment status, also has innocently acquired 100 percent disability, or
- (b) Where unemployable, the veteran has other disabilities innocently acquired which meet the percentage requirements of §§ 4.16 and 4.17 and would render, in the judgment of the rating agency, the average person unable to secure or follow a substantially gainful occupation.

[40 FR 42536, Sept. 15, 1975, as amended at 43 FR 45349, Oct. 2, 1978]

#### §4.18 Unemployability.

A veteran may be considered as unemployable upon termination of employment which was provided on account of disability, or in which special consideration was given on account of the same, when it is satisfactorily shown that he or she is unable to secure further employment. With amputations, sequelae of fractures and other residuals of traumatism shown to be of static character, a showing of continuous unemployability from date of incurrence, or the date the condition reached the stabilized level, is a general requirement in order to establish the fact that present unemployability is the result of the disability. However,

consideration is to be given to the circumstances of employment in individual claims, and, if the employment was only occasional, intermittent, tryout or unsuccessful, or eventually terminated on account of the disability, present unemployability may be attributed to the static disability. Where unemployability for pension previously has been established on the basis of combined service-connected and nonservice-connected disabilities and the service-connected disability or disabilities have increased in severity, §4.16 is for consideration.

[40 FR 42536, Sept. 15, 1975, as amended at 43 FR 45349, Oct. 2, 1978]

#### § 4.19 Age in service-connected claims.

Age may not be considered as a factor in evaluating service-connected disability; and unemployability, in service-connected claims, associated with advancing age or intercurrent disability, may not be used as a basis for a total disability rating. Age, as such, is a factor only in evaluations of disability not resulting from service, *i.e.*, for the purposes of pension.

[29 FR 6718, May 22, 1964, as amended at 43 FR 45349, Oct. 2, 1978]

#### § 4.20 Analogous ratings.

When an unlisted condition is encountered it will be permissible to rate under a closely related disease or injury in which not only the functions affected, but the anatomical localization and symptomatology are closely analogous. Conjectural analogies will be avoided, as will the use of analogous ratings for conditions of doubtful diagnosis, or for those not fully supported by clinical and laboratory findings. Nor will ratings assigned to organic diseases and injuries be assigned by analogy to conditions of functional origin.

#### § 4.21 Application of rating schedule.

In view of the number of atypical instances it is not expected, especially with the more fully described grades of disabilities, that all cases will show all the findings specified. Findings sufficiently characteristic to identify the disease and the disability therefrom, and above all, coordination of rating

with impairment of function will, however, be expected in all instances.

[41 FR 11293, Mar. 18, 1976]

# § 4.22 Rating of disabilities aggravated by active service.

In cases involving aggravation by active service, the rating will reflect only the degree of disability over and above the degree existing at the time of entrance into the active service, whether the particular condition was noted at the time of entrance into the active service, or it is determined upon the evidence of record to have existed at that time. It is necessary therefore, in all cases of this character to deduct from the present degree of disability the degree, if ascertainable, of the disability existing at the time of entrance into active service, in terms of the rating schedule, except that if the disability is total (100 percent) no deduction will be made. The resulting difference will be recorded on the rating sheet. If the degree of disability at the time of entrance into the service is not ascertainable in terms of the schedule, no deduction will be made.

#### §4.23 Attitude of rating officers.

It is to be remembered that the majority of applicants are disabled persons who are seeking benefits of law to which they believe themselves entitled. In the exercise of his or her functions. rating officers must not allow their personal feelings to intrude; an antagonistic, critical, or even abusive attitude on the part of a claimant should not in any instance influence the officers in the handling of the case. Fairness and courtesy must at all times be shown to applicants by all employees whose duties bring them in contact, directly or indirectly, with the Department's claimants.

[41 FR 11292, Mar. 18, 1976]

#### § 4.24 Correspondence.

All correspondence relative to the interpretation of the schedule for rating disabilities, requests for advisory opinions, questions regarding lack of clarity or application to individual cases involving unusual difficulties, will be addressed to the Director, Compensation Service. A clear statement will be

#### § 4.25

made of the point or points upon which information is desired, and the complete case file will be simultaneously forwarded to Central Office. Rating agencies will assure themselves that the recent report of physical examination presents an adequate picture of the claimant's condition. Claims in regard to which the schedule evaluations are considered inadequate or excessive, and errors in the schedule will be similarly brought to attention.

 $[41\ {\rm FR}\ 11292,\ {\rm Mar.}\ 18,\ 1976,\ {\rm as}\ {\rm amended}\ {\rm at}\ 79\ {\rm FR}\ 2100,\ {\rm Jan.}\ 13,\ 2014]$ 

#### §4.25 Combined ratings table.

Table I, Combined Ratings Table, results from the consideration of the efficiency of the individual as affected first by the most disabling condition, then by the less disabling condition, then by other less disabling conditions, if any, in the order of severity. Thus, a person having a 60 percent disability is considered 40 percent efficient. Proceeding from this 40 percent efficiency, the effect of a further 30 percent disability is to leave only 70 percent of the efficiency remaining after consideration of the first disability, or 28 percent efficiency altogether. The individual is thus 72 percent disabled, as shown in table I opposite 60 percent and under 30 percent.

(a) To use table I, the disabilities will first be arranged in the exact order of their severity, beginning with the greatest disability and then combined with use of table I as hereinafter indicated. For example, if there are two disabilities, the degree of one disability will be read in the left column and the degree of the other in the top row, whichever is appropriate. The figures appearing in the space where the column and row intersect will represent the combined value of the two. This combined value will then be converted to the nearest number divisible by 10, and combined values ending in 5 will be adjusted upward. Thus, with a 50 percent disability and a 30 percent disability, the combined value will be found to be 65 percent, but the 65 percent must be converted to 70 percent to represent the final degree of disability. Similarly, with a disability of 40 percent, and another disability of 20 percent, the combined value is found to be 52 percent, but the 52 percent must be converted to the nearest degree divisible by 10, which is 50 percent. If there are more than two disabilities, the disabilities will also be arranged in the exact order of their severity and the combined value for the first two will be found as previously described for two disabilities. The combined value, exactly as found in table I, will be combined with the degree of the third disability (in order of severity). The combined value for the three disabilities will be found in the space where the column and row intersect, and if there are only three disabilities will be converted to the nearest degree divisible by 10, adjusting final 5's upward. Thus, if there are three disabilities ratable at 60 percent, 40 percent, and 20 percent, respectively, the combined value for the first two will be found opposite 60 and under 40 and is 76 percent. This 76 will be combined with 20 and the combined value for the three is 81 percent. This combined value will be converted to the nearest degree divisible by 10 which is 80 percent. The same procedure will be employed when there are four or more disabilities. (See table I).

(b) Except as otherwise provided in this schedule, the disabilities arising from a single disease entity, e.g., arthritis, multiple sclerosis, cerebrovascular accident, etc., are to be rated separately as are all other disabiling conditions, if any. All disabilities are then to be combined as described in paragraph (a) of this section. The conversion to the nearest degree divisible by 10 will be done only once per rating decision, will follow the combining of all disabilities, and will be the last procedure in determining the combined degree of disability.

TABLE I—COMBINED RATINGS TABLE [10 combined with 10 is 19]

|    | 10       | 20       | 30       | 40       | 50       | 60       | 70       | 80 | 90       |

[41 FR 11293, Mar. 18, 1976, as amended at 54 FR 27161, June 28, 1989; 54 FR 36029, Aug. 31, 1989; 83 FR 17756, Apr. 24, 2018]

#### §4.26 Bilateral factor.

Except as provided in paragraph (d) of this section, when a partial disability results from disease or injury of both arms, or of both legs, or of paired skeletal muscles, the ratings for the disabilities of the right and left sides will be combined as usual, and 10 percent of this value will be added (i.e., not combined) before proceeding with further combinations, or converting to degree of disability. The bilateral factor will be applied to such bilateral disabilities before other combinations are carried out and the rating for such disabilities including the bilateral factor in this section will be treated as one disability for the purpose of arranging in order of severity and for all further combinations. For example, with disabilities evaluated at 60 percent, 20 percent, 10 percent and 10 percent (with the two 10 percent evaluations being bilateral disabilities), the order of severity would be 60, 21 and 20. The 60 and 21 combine to 68 percent and the 68 and 20 combine to 74 percent, converted to 70 percent as the final degree of disability.

(a) Definitions. The use of the terms "arms" and "legs" is not intended to distinguish between the arm, forearm and hand, or the thigh, leg, and foot, but relates to the upper extremities and lower extremities as a whole. Thus with a compensable disability of the right thigh, for example, amputation, and one of the left foot, for example, pes planus, the bilateral factor applies, and similarly whenever there are compensable disabilities affecting use of paired extremities regardless of location or specified type of impairment.

(b) Procedure for four affected extremities. The correct procedure when applying the bilateral factor to disabil-

ities affecting both upper extremities and both lower extremities is to combine the ratings of the disabilities affecting the 4 extremities in the order of their individual severity and apply the bilateral factor by adding, not combining, 10 percent of the combined value thus attained.

(c) Applicability. The bilateral factor is not applicable unless there is partial disability of compensable degree in each of 2 paired extremities, or paired skeletal muscles.

(d) Exception. In cases where the combined evaluation is lower than what could be achieved by not including one or more bilateral disabilities in the bilateral factor calculation, those bilateral disabilities will be removed from the bilateral factor calculation and combined separately, to achieve the combined evaluation most favorable to the veteran.

[29 FR 6718, May 22, 1964, as amended at 88 FR 22917, Apr. 14, 2023]

#### § 4.27 Use of diagnostic code numbers.

The diagnostic code numbers appearing opposite the listed ratable disabilities are arbitrary numbers for the purpose of showing the basis of the evaluation assigned and for statistical analvsis in the Department of Veterans Affairs, and as will be observed, extend from 5000 to a possible 9999. Great care will be exercised in the selection of the applicable code number and in its citation on the rating sheet. No other numbers than these listed or hereafter furnished are to be employed for rating purposes, with an exception as described in this section, as to unlisted conditions. When an unlisted disease, injury, or residual condition is encountered, requiring rating by analogy, the diagnostic code number will be "builtup" as follows: The first 2 digits will be selected from that part of the schedule most closely identifying the part, or system, of the body involved; the last 2 digits will be "99" for all unlisted conditions. This procedure will facilitate a close check of new and unlisted conditions, rated by analogy. In the selection of code numbers, injuries will generally be represented by the number assigned to the residual condition on the basis of which the rating is determined. With diseases, preference is to be given to the number assigned to the disease itself; if the rating is determined on the basis of residual conditions, the number appropriate to the residual condition will be added, preceded by a hyphen. Thus, rheumatoid (atrophic) arthritis rated as ankylosis of the lumbar spine should be coded "5002-5240." In this way, the exact source of each rating can be easily identified. In the citation of disabilities on rating sheets, the diagnostic terminology will be that of the medical examiner, with no attempt to translate the terms into schedule nomenclature. Residuals of diseases or therapeutic procedures will not be cited without reference to the hasic disease

 $[41~{\rm FR}~11293,~{\rm Mar.}~18,~1976,~{\rm as~amended~at}~70~{\rm FR}~75399,~{\rm Dec.}~20,~2005]$ 

# § 4.28 Prestabilization rating from date of discharge from service.

The following ratings may be assigned, in lieu of ratings prescribed elsewhere, under the conditions stated for disability from any disease or injury. The prestabilization rating is not to be assigned in any case in which a total rating is immediately assignable under the regular provisions of the schedule or on the basis of individual unemployability. The prestabilization 50-percent rating is not to be used in any case in which a rating of 50 percent or more is immediately assignable under the regular provisions.

|  | Rating |
|--|--------|
| Unstabilized condition with severe disability—<br>Substantially gainful employment is not fea-<br>sible or advisable | 100    |
| Unhealed or incompletely healed wounds or in-<br>iuries—   |        |
| Material impairment of employability likely  | 50     |

NOTE (1): Department of Veterans Affairs examination is not required prior to assignment of prestabilization ratings; however, the fact that examination was accomplished will not preclude assignment of these benefits. Prestabilization ratings are for assignment in the immediate postdischarge period. They will continue for a 12-month period following discharge from service. However, prestabilization ratings may be changed to a regular schedular total rating or one authorizing a greater benefit at any time. In each prestabilization rating an examination will be requested to be accomplished not earlier than 6 months nor more than 12 months following discharge. In those prestabilization ratings in which following examination reduction in evaluation is found to be warranted, the higher evaluation will be continued to the end of the 12th month following discharge or to the end of the period provided under §3.105(e) of this chapter, whichever is later. Special monthly compensation should be assigned concurrently in these cases whenever records are adequate to establish entitlement.

NOTE (2): Diagnosis of disease, injury, or residuals will be cited, with diagnostic code number assigned from this rating schedule for conditions listed therein.

[35 FR 11906, July 24, 1970]

# § 4.29 Ratings for service-connected disabilities requiring hospital treatment or observation.

A total disability rating (100 percent) will be assigned without regard to other provisions of the rating schedule when it is established that a service-connected disability has required hospital treatment in a Department of Veterans Affairs or an approved hospital for a period in excess of 21 days or hospital observation at Department of Veterans Affairs expense for a service-connected disability for a period in excess of 21 days.

(a) Subject to the provisions of paragraphs (d), (e), and (f) of this section this increased rating will be effective the first day of continuous hospitalization and will be terminated effective the last day of the month of hospital discharge (regular discharge or release to non-bed care) or effective the last day of the month of termination of treatment or observation for the service-connected disability. A temporary release which is approved by an attending Department of Veterans Affairs physician as part of the treatment plan will not be considered an absence.

#### §4.30

- (1) An authorized absence in excess of 4 days which begins during the first 21 days of hospitalization will be regarded as the equivalent of hospital discharge effective the first day of such authorized absence. An authorized absence of 4 days or less which results in a total of more than 8 days of authorized absence during the first 21 days of hospitalization will be regarded as the equivalent of hospital discharge effective the ninth day of authorized absence.
- (2) Following a period of hospitalization in excess of 21 days, an authorized absence in excess of 14 days or a third consecutive authorized absence of 14 days will be regarded as the equivalent of hospital discharge and will interrupt hospitalization effective on the last day of the month in which either the authorized absence in excess of 14 days or the third 14 day period begins, except where there is a finding that convalescence is required as provided by paragraph (e) or (f) of this section. The termination of these total ratings will not be subject to §3.105(e) of this chapter
- (b) Notwithstanding that hospital admission was for disability not connected with service, if during such hospitalization, hospital treatment for a service-connected disability is instituted and continued for a period in excess of 21 days, the increase to a total rating will be granted from the first day of such treatment. If service connection for the disability under treatment is granted after hospital admission, the rating will be from the first day of hospitalization if otherwise in order.
- (c) The assignment of a total disability rating on the basis of hospital treatment or observation will not preclude the assignment of a total disability rating otherwise in order under other provisions of the rating schedule, and consideration will be given to the propriety of such a rating in all instances and to the propriety of its continuance after discharge. Particular attention, with a view to proper rating under the rating schedule, is to be given to the claims of veterans discharged from hospital, regardless of length of hospitalization, with indications on the final summary of expected confinement to bed or house, or to in-

ability to work with requirement of frequent care of physician or nurse at home.

- (d) On these total ratings Department of Veterans Affairs regulations governing effective dates for increased benefits will control.
- (e) The total hospital rating if convalescence is required may be continued for periods of 1, 2, or 3 months in addition to the period provided in paragraph (a) of this section.
- (f) Extension of periods of 1, 2 or 3 months beyond the initial 3 months may be made upon approval of the Veterans Service Center Manager.
- (g) Meritorious claims of veterans who are discharged from the hospital with less than the required number of days but need post-hospital care and a prolonged period of convalescence will be referred to the Director, Compensation Service, under §3.321(b)(1) of this chapter.

[29 FR 6718, May 22, 1964, as amended at 41 FR 11294, Mar. 18, 1976; 41 FR 34256, Aug. 13, 1976; 54 FR 4281, Jan. 30, 1989; 54 FR 34981, Aug. 23, 1989; 71 FR 28586, May 17, 2006; 79 FR 2100, Jan. 13, 2014]

#### §4.30 Convalescent ratings.

A total disability rating (100 percent) will be assigned without regard to other provisions of the rating schedule when it is established by report at hospital discharge (regular discharge or release to non-bed care) or outpatient release that entitlement is warranted under paragraph (a) (1), (2) or (3) of this section effective the date of hospital admission or outpatient treatment and continuing for a period of 1, 2, or 3 months from the first day of the month following such hospital discharge or outpatient release. The termination of these total ratings will not be subject to §3.105(e) of this chapter. Such total rating will be followed by appropriate schedular evaluations. When the evidence is inadequate to assign a schedular evaluation, a physical examination will be scheduled and considered prior to the termination of a total rating under this section.

(a) Total ratings will be assigned under this section if treatment of a service-connected disability resulted in:

- (1) Surgery necessitating at least one month of convalescence (Effective as to outpatient surgery March 1, 1989.)
- (2) Surgery with severe postoperative residuals such as incompletely healed surgical wounds, stumps of recent amputations, therapeutic immobilization of one major joint or more, application of a body cast, or the necessity for house confinement, or the necessity for continued use of a wheelchair or crutches (regular weight-bearing prohibited). (Effective as to outpatient surgery March 1, 1989.)
- (3) Immobilization by cast, without surgery, of one major joint or more. (Effective as to outpatient treatment March 10, 1976.)

A reduction in the total rating will not be subject to §3.105(e) of this chapter. The total rating will be followed by an open rating reflecting the appropriate schedular evaluation; where the evidence is inadequate to assign the schedular evaluation, a physcial examination will be scheduled prior to the end of the total rating period.

- (b) A total rating under this section will require full justification on the rating sheet and may be extended as follows:
- (1) Extensions of 1, 2 or 3 months beyond the initial 3 months may be made under paragraph (a) (1), (2) or (3) of this section.
- (2) Extensions of 1 or more months up to 6 months beyond the initial 6 months period may be made under paragraph (a) (2) or (3) of this section upon approval of the Veterans Service Center Manager.

[41 FR 34256, Aug. 13, 1976, as amended at 54 FR 4281, Jan. 30, 1989; 71 FR 28586, May 17, 2006]

#### § 4.31 Zero percent evaluations.

In every instance where the schedule does not provide a zero percent evaluation for a diagnostic code, a zero percent evaluation shall be assigned when the requirements for a compensable evaluation are not met.

[58 FR 52018, Oct. 6, 1993]

#### Subpart B—Disability Ratings

THE MUSCULOSKELETAL SYSTEM

#### § 4.40 Functional loss.

Disability of the musculoskeletal system is primarily the inability, due to damage or infection in parts of the system, to perform the normal working movements of the body with normal excursion, strength, speed, coordination and endurance. It is essential that the examination on which ratings are based adequately portray the anatomical damage, and the functional loss, with respect to all these elements. The functional loss may be due to absence of part, or all, of the necessary bones, joints and muscles, or associated structures, or to deformity, adhesions, defective innervation, or other pathology, or it may be due to pain, supported by adequate pathology and evidenced by the visible behavior of the claimant undertaking the motion. Weakness is as important as limitation of motion, and a part which becomes painful on use must be regarded as seriously disabled. A little used part of the musculoskeletal system may be expected to show evidence of disuse, either through atrophy, the condition of the skin, absence of normal callosity or the like.

#### § 4.41 History of injury.

In considering the residuals of injury, it is essential to trace the medical-industrial history of the disabled person from the original injury, considering the nature of the injury and the attendant circumstances, and the requirements for, and the effect of, treatment over past periods, and the course of the recovery to date. The duration of the initial, and any subsequent, period of total incapacity, especially periods reflecting delayed union, inflammation, swelling, drainage, or operative intervention, should be given close attention. This consideration, or the absence of clear cut evidence of injury, may result in classifying the disability as not of traumatic origin, either reflecting congenital or developmental etiology, or the effects of healed dis-

#### §4.42

# § 4.42 Complete medical examination of injury cases.

The importance of complete medical examination of injury cases at the time of first medical examination by the Department of Veterans Affairs cannot be overemphasized. When possible, this should include complete neurological and psychiatric examination, and other special examinations indicated by the physical condition, in addition to the required general and orthopedic or surgical examinations. When complete examinations are not conducted covering all systems of the body affected by disease or injury, it is impossible to visualize the nature and extent of the service connected disability. Incomplete examination is a common cause of incorrect diagnosis, especially in the neurological and psychiatric fields, and frequently leaves the Department of Veterans Affairs in doubt as to the presence or absence of disabling conditions at the time of the examination.

## § 4.43 Osteomyelitis.

Chronic, or recurring, suppurative osteomyelitis, once clinically identified, including chronic inflammation of bone marrow, cortex, or periosteum, should be considered as a continuously disabling process, whether or not an actively discharging sinus or other obvious evidence of infection is manifest from time to time, and unless the focus is entirely removed by amputation will entitle to a permanent rating to be combined with other ratings for residual conditions, however, not exceeding amputation ratings at the site of election.

### § 4.44 The bones.

The osseous abnormalities incident to trauma or disease, such as malunion with deformity throwing abnormal stress upon, and causing malalignment of joint surfaces, should be depicted from study and observation of all available data, beginning with inception of injury or disease, its nature, degree of prostration, treatment and duration of convalescence, and progress of recovery with development of permanent residuals. With shortening of a long bone, some degree of angulation is to be expected; the extent and direction should be brought out by X-ray and observa-

tion. The direction of angulation and extent of deformity should be carefully related to strain on the neighboring joints, especially those connected with weight-bearing.

#### § 4.45 The joints.

As regards the joints the factors of disability reside in reductions of their normal excursion of movements in different planes. Inquiry will be directed to these considerations:

- (a) Less movement than normal (due to ankylosis, limitation or blocking, adhesions, tendon-tie-up, contracted scars, etc.).
- (b) More movement than normal (from flail joint, resections, nonunion of fracture, relaxation of ligaments, etc.).
- (c) Weakened movement (due to muscle injury, disease or injury of peripheral nerves, divided or lengthened tendons, etc.).
  - (d) Excess fatigability.
- (e) Incoordination, impaired ability to execute skilled movements smoothlv.
- (f) Pain on movement, swelling, deformity or atrophy of disuse. Instability of station, disturbance of locomotion, interference with sitting, standing and weight-bearing are related considerations. For the purpose of rating disability from arthritis, the shoulder, elbow, wrist, hip, knee, and ankle are considered major joints; multiple involvements of the interphalangeal, metacarpal and carpal joints of the upper extremities, the interphalangeal, metatarsal and tarsal joints of the lower extremities, the cervical vertebrae, the dorsal vertebrae, and the lumbar vertebrae, are considered groups of minor joints, ratable on a with major parity ioints. lumbosacral articulation and both sacroiliac joints are considered to be a group of minor joints, ratable on disturbance of lumbar spine functions.

#### §4.46 Accurate measurement.

Accurate measurement of the length of stumps, excursion of joints, dimensions and location of scars with respect to landmarks, should be insisted on. The use of a goniometer in the measurement of limitation of motion is indispensable in examinations conducted

within the Department of Veterans Affairs. Muscle atrophy must also be accurately measured and reported.

[41 FR 11294, Mar. 18, 1976]

#### §§ 4.47-4.54 [Reserved]

# § 4.55 Principles of combined ratings for muscle injuries.

- (a) A muscle injury rating will not be combined with a peripheral nerve paralysis rating of the same body part, unless the injuries affect entirely different functions.
- (b) For rating purposes, the skeletal muscles of the body are divided into 23 muscle groups in 5 anatomical regions: 6 muscle groups for the shoulder girdle and arm (diagnostic codes 5301 through 5306); 3 muscle groups for the forearm and hand (diagnostic codes 5307 through 5309); 3 muscle groups for the foot and leg (diagnostic codes 5310 through 5312); 6 muscle groups for the pelvic girdle and thigh (diagnostic codes 5313 through 5318); and 5 muscle groups for the torso and neck (diagnostic codes 5319 through 5323).
- (c) There will be no rating assigned for muscle groups which act upon an ankylosed joint, with the following exceptions:
- (1) In the case of an ankylosed knee, if muscle group XIII is disabled, it will be rated, but at the next lower level than that which would otherwise be assigned.
- (2) In the case of an ankylosed shoulder, if muscle groups I and II are severely disabled, the evaluation of the shoulder joint under diagnostic code 5200 will be elevated to the level for unfavorable ankylosis, if not already assigned, but the muscle groups themselves will not be rated.
- (d) The combined evaluation of muscle groups acting upon a single unankylosed joint must be lower than the evaluation for unfavorable ankylosis of that joint, except in the case of muscle groups I and II acting upon the shoulder.
- (e) For compensable muscle group injuries which are in the same anatomical region but do not act on the same joint, the evaluation for the most severely injured muscle group will be increased by one level and used as the

combined evaluation for the affected muscle groups.

(f) For muscle group injuries in different anatomical regions which do not act upon ankylosed joints, each muscle group injury shall be separately rated and the ratings combined under the provisions of §4.25.

(Authority: 38 U.S.C. 1155) [62 FR 30237, June 3, 1997]

# § 4.56 Evaluation of muscle disabilities.

- (a) An open comminuted fracture with muscle or tendon damage will be rated as a severe injury of the muscle group involved unless, for locations such as in the wrist or over the tibia, evidence establishes that the muscle damage is minimal.
- (b) A through-and-through injury with muscle damage shall be evaluated as no less than a moderate injury for each group of muscles damaged.
- (c) For VA rating purposes, the cardinal signs and symptoms of muscle disability are loss of power, weakness, lowered threshold of fatigue, fatigue-pain, impairment of coordination and uncertainty of movement.
- (d) Under diagnostic codes 5301 through 5323, disabilities resulting from muscle injuries shall be classified as slight, moderate, moderately severe or severe as follows:
- (1) Slight disability of muscles—(i) Type of injury. Simple wound of muscle without debridement or infection.
- (ii) History and complaint. Service department record of superficial wound with brief treatment and return to duty. Healing with good functional results. No cardinal signs or symptoms of muscle disability as defined in paragraph (c) of this section.
- (iii) Objective findings. Minimal scar. No evidence of fascial defect, atrophy, or impaired tonus. No impairment of function or metallic fragments retained in muscle tissue.
- (2) Moderate disability of muscles—(i) Type of injury. Through and through or deep penetrating wound of short track from a single bullet, small shell or shrapnel fragment, without explosive effect of high velocity missile, residuals of debridement, or prolonged infection.

#### §4.57

- (ii) History and complaint. Service department record or other evidence of in-service treatment for the wound. Record of consistent complaint of one or more of the cardinal signs and symptoms of muscle disability as defined in paragraph (c) of this section, particularly lowered threshold of fatigue after average use, affecting the particular functions controlled by the injured muscles.
- (iii) Objective findings. Entrance and (if present) exit scars, small or linear, indicating short track of missile through muscle tissue. Some loss of deep fascia or muscle substance or impairment of muscle tonus and loss of power or lowered threshold of fatigue when compared to the sound side.
- (3) Moderately severe disability of muscles—(i) Type of injury. Through and through or deep penetrating wound by small high velocity missile or large low-velocity missile, with debridement, prolonged infection, or sloughing of soft parts, and intermuscular scarring.
- (ii) History and complaint. Service department record or other evidence showing hospitalization for a prolonged period for treatment of wound. Record of consistent complaint of cardinal signs and symptoms of muscle disability as defined in paragraph (c) of this section and, if present, evidence of inability to keep up with work requirements.
- (iii) Objective findings. Entrance and (if present) exit scars indicating track of missile through one or more muscle groups. Indications on palpation of loss of deep fascia, muscle substance, or normal firm resistance of muscles compared with sound side. Tests of strength and endurance compared with sound side demonstrate positive evidence of impairment.
- (4) Severe disability of muscles—(i) Type of injury. Through and through or deep penetrating wound due to high-velocity missile, or large or multiple low velocity missiles, or with shattering bone fracture or open comminuted fracture with extensive debridement, prolonged infection, or sloughing of soft parts, intermuscular binding and scarring.
- (ii) *History and complaint*. Service department record or other evidence showing hospitalization for a prolonged period for treatment of wound. Record

- of consistent complaint of cardinal signs and symptoms of muscle disability as defined in paragraph (c) of this section, worse than those shown for moderately severe muscle injuries, and, if present, evidence of inability to keep up with work requirements.
- (iii) Objective findings. Ragged, depressed and adherent scars indicating wide damage to muscle groups in missile track. Palpation shows loss of deep fascia or muscle substance, or soft flabby muscles in wound area. Muscles swell and harden abnormally in contraction. Tests of strength, endurance, or coordinated movements compared with the corresponding muscles of the uninjured side indicate severe impairment of function. If present, the following are also signs of severe muscle disability:
- (A) X-ray evidence of minute multiple scattered foreign bodies indicating intermuscular trauma and explosive effect of the missile.
- (B) Adhesion of scar to one of the long bones, scapula, pelvic bones, sacrum or vertebrae, with epithelial sealing over the bone rather than true skin covering in an area where bone is normally protected by muscle.
- (C) Diminished muscle excitability to pulsed electrical current in electrodiagnostic tests.
  - (D) Visible or measurable atrophy.
- (E) Adaptive contraction of an opposing group of muscles.
- (F) Atrophy of muscle groups not in the track of the missile, particularly of the trapezius and serratus in wounds of the shoulder girdle.
- (G) Induration or atrophy of an entire muscle following simple piercing by a projectile.

(Authority: 38 U.S.C. 1155 [62 FR 30238, June 3, 1997]

#### § 4.57 Static foot deformities.

It is essential to make an initial distinction between bilateral flatfoot as a congenital or as an acquired condition. The congenital condition, with depression of the arch, but no evidence of abnormal callosities, areas of pressure, strain or demonstrable tenderness, is a congenital abnormality which is not

compensable or pensionable. In the acquired condition, it is to be remembered that depression of the longitudinal arch, or the degree of depression, is not the essential feature. The attention should be given to anatomical changes, as compared to normal, in the relationship of the foot and leg, particularly to the inward rotation of the superior portion of the os calcis, medial deviation of the insertion of the Achilles tendon, the medial tilting of the upper border of the astragalus. This is an unfavorable mechanical relationship of the parts. A plumb line dropped from the middle of the patella falls inside of the normal point. The forepart of the foot is abducted, and the foot everted. The plantar surface of the foot is painful and shows demonstrable tenderness, and manipulation of the foot produces spasm of the Achilles tendon, peroneal spasm due to adhesion about the peroneal sheaths, and other evidence of pain and limited motion. The symptoms should be apparent without regard to exercise. In severe cases there is gaping of bones on the inner border of the foot, and rigid valgus position with loss of the power of inversion and adduction. Exercise with undeveloped or unbalanced musculature, producing chronic irritation, can be an aggravating factor. In the absence of trauma or other definite evidence of aggravation, service connection is not in order for pes cavus which is a typically congenital or juvenile disease.

#### §4.58 Arthritis due to strain.

With service incurred lower extremity amputation or shortening, a disabling arthritis, developing in the same extremity, or in both lower extremities, with indications of earlier, or more severe, arthritis in the injured extremity, including also arthritis of the lumbosacral joints and lumbar spine, if associated with the leg amputation or shortening, will be considered as service incurred, provided, however, that arthritis affecting joints not directly subject to strain as a result of the service incurred amputation will not be granted service connection. This will generally require separate evaluation of the arthritis in the joints directly subject to strain. Amputation,

or injury to an upper extremity, is not considered as a causative factor with subsequently developing arthritis, except in joints subject to direct strain or actually injured.

#### § 4.59 Painful motion.

With any form of arthritis, painful motion is an important factor of disability, the facial expression, wincing, etc., on pressure or manipulation, should be carefully noted and definitely related to affected joints. Muscle spasm will greatly assist the identification. Sciatic neuritis is not uncommonly caused by arthritis of the spine. The intent of the schedule is to recognize painful motion with joint or periarticular pathology as productive of disability. It is the intention to recognize actually painful, unstable, or malaligned joints, due to healed injury, as entitled to at least the minimum compensable rating for the joint. Crepitation either in the soft tissues such as the tendons or ligaments, or crepitation within the joint structures should be noted carefully as points of contact which are diseased. Flexion elicits such manifestations. The joints involved should be tested for pain on both active and passive motion, in weight-bearing and nonweight-bearing and, if possible, with the range of the opposite undamaged joint.

#### § 4.60 [Reserved]

### §4.61 Examination.

With any form of arthritis (except traumatic arthritis) it is essential that the examination for rating purposes cover all major joints, with especial reference to Heberden's or Haygarth's nodes.

#### § 4.62 Circulatory disturbances.

The circulatory disturbances, especially of the lower extremity following injury in the popliteal space, must not be overlooked, and require rating generally as phlebitis.

#### § 4.63 Loss of use of hand or foot.

Loss of use of a hand or a foot, for the purpose of special monthly compensation, will be held to exist when no effective function remains other than that which would be equally well

#### §4.64

served by an amputation stump at the site of election below elbow or knee with use of a suitable prosthetic appliance. The determination will be made on the basis of the actual remaining function of the hand or foot, whether the acts of grasping, manipulation, etc., in the case of the hand, or of balance and propulsion, etc., in the case of the foot, could be accomplished equally well by an amputation stump with prosthesis.

(a) Extremely unfavorable complete ankylosis of the knee, or complete ankylosis of 2 major joints of an extremity, or shortening of the lower extremity of 3½ inches (8.9 cms.) or more, will be taken as loss of use of the hand or foot involved.

(b) Complete paralysis of the external popliteal nerve (common peroneal) and consequent, footdrop, accompanied by characteristic organic changes including trophic and circulatory disturbances and other concomitants confirmatory of complete paralysis of this nerve, will be taken as loss of use of the foot.

[29 FR 6718, May 22, 1964, as amended at 43 FR 45349, Oct. 2, 1978]

#### § 4.64 Loss of use of both buttocks.

Loss of use of both buttocks shall be deemed to exist when there is severe damage to muscle Group XVII, bilateral (diagnostic code number 5317) and additional disability rendering it impossible for the disabled person, without assistance, to rise from a seated position and from a stooped position (fingers to toes position) and to maintain postural stability (the pelvis upon head of femur). The assistance may be rendered by the person's own hands or arms, and, in the matter of postural stability, by a special appliance.

#### §4.65 [Reserved]

#### § 4.66 Sacroiliac joint.

The common cause of disability in this region is arthritis, to be identified in the usual manner. The lumbosacral and sacroiliac joints should be considered as one anatomical segment for rating purposes. X-ray changes from arthritis in this location are decrease or obliteration of the joint space, with the appearance of increased bone den-

sity of the sacrum and ilium and sharpening of the margins of the joint. Disability is manifest from erector spinae spasm (not accounted for by other pathology), tenderness on deep palpation and percussion over these joints, loss of normal quickness of motion and resiliency, and postural defects often accompanied by limitation of flexion and extension of the hip. Traumatism is a rare cause of disability in this connection, except when superimposed upon congenital defect or upon an existent arthritis; to permit assumption of pure traumatic origin, objective evidence of damage to the joint, and history of trauma sufficiently severe to injure this extremely strong and practically immovable joint is required. There should be careful consideration of lumbosacral sprain, and the various symptoms of pain and paralysis attributable to disease affecting the lumbar vertebrae and the intervertebral disc.

#### §4.67 Pelvic bones.

The variability of residuals following these fractures necessitates rating on specific residuals, faulty posture, limitation of motion, muscle injury, painful motion of the lumbar spine, manifest by muscle spasm, mild to moderate sciatic neuritis, peripheral nerve injury, or limitation of hip motion.

## $\S 4.68$ Amputation rule.

The combined rating for disabilities of an extremity shall not exceed the rating for the amputation at the elective level, were amputation to be performed. For example, the combined evaluations for disabilities below the knee shall not exceed the 40 percent evaluation, diagnostic code 5165. This 40 percent rating may be further combined with evaluation for disabilities above the knee but not to exceed the above the knee amputation elective level. Painful neuroma of a stump after amputation shall be assigned the evaluation for the elective site of reamputation.

#### § 4.69 Dominant hand.

Handedness for the purpose of a dominant rating will be determined by the evidence of record, or by testing on VA examination. Only one hand shall be considered dominant. The injured

hand, or the most severely injured hand, of an ambidextrous individual will be considered the dominant hand for rating purposes.

(Authority: 38 U.S.C. 1155) [62 FR 30239, June 3, 1997]

#### §4.70 Inadequate examinations.

If the report of examination is inadequate as a basis for the required consideration of service connection and evaluation, the rating agency may request a supplementary report from the examiner giving further details as to the limitations of the disabled person's ordinary activity imposed by the disease, injury, or residual condition, the prognosis for return to, or continuance of, useful work. When the best interests of the service will be advanced by personal conference with the examiner, such conference may be arranged through channels.

# § 4.71 Measurement of ankylosis and joint motion.

Plates I and II provide a standardized description of ankylosis and joint motion measurement. The anatomical position is considered as 0°, with two major exceptions: (a) Shoulder rotation—arm abducted to 90°, elbow flexed to 90° with the position of the forearm reflecting the midpoint 0° between internal and external rotation of the shoulder: and (b) supination and pronation—the arm next to the body, elbow flexed to 90°, and the forearm in midposition 0° between supination and pronation. Motion of the thumb and fingers should be described by appropriate reference to the joints (See Plate III) whose movement is limited, with a statement as to how near, in centimeters, the tip of the thumb can approximate the fingers, or how near the tips of the fingers can approximate the proximal transverse crease of palm.

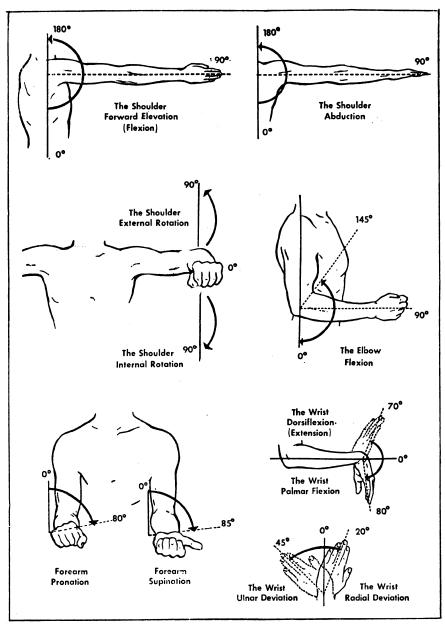

PLATE I

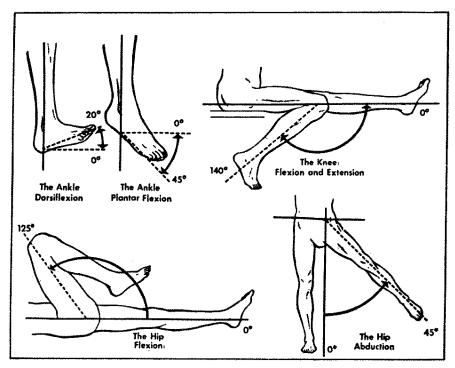

PLATE II

 $[29 \ FR \ 6718, May \ 22, \ 1964, as amended at 43 \ FR \ 45349, Oct. \ 2, \ 1978; \ 67 \ FR \ 48785, July \ 26, \ 2002]$

ACUTE, SUBACUTE, OR CHRONIC DISEASES—Continued

Rat-

NOTE (1): A rating of 10 percent, as an exception to the amputation rule, is to be assigned in any case of active osteomyelitis where the amputation rating for the affected part is no percent. This 10 percent rating and the other partial ratings of 30 percent rot less are to be combined with ratings for ankylosis, limited motion, nonunion or malunion, shortening, etc., subject, of course, to the amputation rule. The 60 percent rating, as it is based on constitutional symptoms, is not subject to the amputation rule. A rating for osteomyelitis will not be applied following cure by removal or radical resection of the affected bone.

# ACUTE, SUBACUTE, OR CHRONIC DISEASES—Continued

|   | Rat-<br>ing |
|---|-------------|
| Note to DCs 5013 through 5024: Evaluate the diseases under diagnostic codes 5013 through 5024 as degenerative arthritis, based on limitation of motion of affected parts.  5025 Fibromyalgia (fibrositis, primary fibromyalgia syndrome)  With widespread musculoskeletal pain and ten- |             |
| der points, with or without associated fatigue,<br>sleep disturbance, stiffness, paresthesias,<br>headache, irritable bowel symptoms, depres-<br>sion, anxiety, or Raynaud's-like symptoms:   |             |
| That are constant, or nearly so, and refractory to therapy  | 40          |
| That are episodic, with exacerbations often<br>precipitated by environmental or emo-<br>tional stress or by overexertion, but that<br>are present more than one-third of the  |             |
| time  | 20          |
| That require continuous medication for con-<br>trol   | 10          |
| NOTE: Widespread pain means pain in both the left and right sides of the body, that is both above and below the waist, and that affects both the axial skeleton ( <i>i.e.</i> , cervical spine, anterior chest, thoracic spine, or low back) and the extremities.                       | 10          |

## PROSTHETIC IMPLANTS AND RESURFACING

|  | Rati  | ing   |
|--|-------|-------|
|  | Major | Minor |
| Note (1): When an evaluation is assigned for joint resurfacing or the prosthetic replacement of a joint under diagnostic codes 5051–5056, an additional rating under §4.71a may not also be assigned for that joint, unless otherwise directed.  Note (2): Only evaluate a revision procedure in the same manner as the original procedure under diagnostic codes 5051–5056 if all the original components are replaced.  Note (3): The term 'prosthetic replacement' in diagnostic codes 5051–5053 and 5055–5056 means a total replacement of the named joint. However, in DC 5054, "prostetic replacement" means a total replacement of the head of the femur or of the acetabulum.  Note (4): The 100 percent rating for 1 year following implantation of prosthesis will commence after initial grant of the |       |       |
| month total rating assigned under § 4.30 following hospital discharge.   |       |       |
| Note (5): The 100 percent rating for 4 months following implantation of prosthesis or resurfacing under DCs 5054 and 5055 will commence after initial grant of the 1-month total rating assigned under §4.30 following hospital discharge.  Note (6): Special monthly compensation is assignable during the 100 percent rating period the earliest date permanent use of crutches is established.  5051 Shoulder replacement (prosthesis).   |       |       |

# EVALUATION OF ANKYLOSIS OR LIMITATION OF MOTION OF SINGLE OR MULTIPLE DIGITS OF THE HAND

|  | Rati  | ing   |
|--|-------|-------|
|  | Major | Minor |
| (1) For the index, long, ring, and little fingers (digits II, III, IV, and V), zero degrees of flexion represents the fingers fully extended, making a straight line with the rest of the hand. The position of function of the hand is with the wrist dorsiflexed 20 to 30 degrees, the metacarpophalangeal and proximal interphalangeal joints flexed to 30 degrees, and the thumb (digit I) abducted and rotated so that the thumb pad faces the finger pads. Only joints in these positions are considered to be in favorable position. For digits II through V, the metacarpophalangeal joint has a range of zero to 90 degrees of flexion, the proximal interphalangeal joint has a range of zero to 100 degrees of flexion, and the distal (terminal) interphalangeal joint has a range of zero to 70 or 80 degrees of flexion. |       |       |
| ion  |       |       |
| the next higher level  |       |       |
| thereto  (ii) If both the metacarpophalangeal and proximal interphalangeal joints of a digit are ankylosed, evaluate as unfavorable ankylosis, even if each joint is individually fixed in a favorable position.   |       |       |

## THE SPINE—Continued

|   | Rat-         |  | Rat-   |
|---|--------------|--|--------|
| General Rating Formula for Diseases and Injuries of the Spine  (For diagnostic codes 5235 to 5243 unless 5243 is evaluated under the Formula for Rating Intervertebral Disc Syndrome Based on Incapacitating Episodes):  With or without symptoms such as pain (whther or not it radiates), stiffness, or aching in the area of the spine affected by residuals of injury or disease  Unfavorable ankylosis of the entire spine | 100 50 40 20 | Note (2): (See also Plate V.) For VA compensation purposes, normal forward flexion of the cervical spine is zero to 45 degrees, extension is zero to 45 degrees, left and right lateral flexion are zero to 45 degrees, and left and right lateral rotation are zero to 80 degrees. Normal forward flexion of the thoracolumbar spine is zero to 90 degrees, extension is zero to 30 degrees, left and right lateral flexion are zero to 30 degrees, and left and right lateral flexion are zero to 30 degrees, and left and right lateral flexion, and left and right rotation. The normal combined range of motion refers to the sum of the range of forward flexion, extension, left and right lateral flexion, and left and right rotation. The normal combined range of motion of the cervical spine is 340 degrees and of the thoracolumbar spine is 240 degrees. The normal ranges of motion for each component of spinal motion provided in this note are the maximum that can be used for calculation of the combined range of motion.  Note (3): In exceptional cases, an examiner may state that because of age, body habitus, neurologic disease, or other factors not the result of disease or injury of the spine, the range of motion of the spine in a particular individual, even though it does not conform to the normal range of motion stated in Note (2). Provided that the examiner supplies an explanation, the examiner's assessment that the range of motion is normal for that individual will be accepted.  Note (4): Round each range of motion measurement to the nearest five degrees.  Note (5): For VA compensation purposes, unfavorable ankylosis is a condition in which the entire cervical spine, the entire thoracolumbar spine, or the entire spine is fixed in flexion or extension, and the ankylosis results in one or more of the following: difficulty walking because of a limited line of vision; restricted opening of the mouth and chewing; breathing limited to diaphragmatic respiration; gastrointestinal symptoms due to nerve root stretching. Fixation of a spinal seg | Rating |
| or more of the height   | 10           | 5243 Intervertebral disc syndrome: Assign this diagnostic code only when there is disc herniation with compression and/or irritation of the adjacent nerve root; assign diagnostic code 5242 for all other disc diagnoses.   |        |

|---|---|-------------|
| Evaluate intervertebral disc syndrome (preoperatively or postoperatively) either under the General Rating Formula for Diseases and Injuries of the Spine or under the Formula for Rating Intervertebral Disc Syndrome Based on Incapacitating Episodes, whichever method results in the higher evaluation when all disabilities are combined under § 4.25.  5244 Traumatic paralysis, complete: Paraplegia: Rate under diagnostic code 5110. Quadriplegia: Rate separately under diagnostic codes 5109 and 5110 and combine evaluations in accordance with § 4.25.  Note: If traumatic paralysis does not cause loss of use of both hands or both feet, it is incomplete paralysis. Evaluate residuals of incomplete traumatic paralysis under the appropriate diagnostic code (e.g., § 4.124a, Diseases of the Peripheral Nerves).  Formula for Rating Intervertebral Disc Syndrome Based on Incapacitating Episodes  With incapacitating episodes having a total duration of at least 6 weeks during the past 12 months | With incapacitating episodes having a tota of at least 4 weeks but less than 6 wee the past 12 months | ks during   |

## §4.72 [Reserved]

#### § 4.73 Schedule of ratings—muscle injuries.

NOTE (1): When evaluating any claim involving muscle injuries resulting in loss of use of any extremity or loss of use of both buttocks (diagnostic code 5317, Muscle Group XVII), refer to §3.350 of this chapter to determine whether the veteran may be entitled to special monthly compensation.

NOTE (2): Ratings of slight, moderate, moderately severe, or severe for diagnostic codes 5301 through 5323 will be determined based upon the criteria contained in §4.56.

#### THE SHOULDER GIRDLE AND ARM

|  | Rating              |                       |
|--|---------------------|-----------------------|
|  | Domi-<br>nant       | Non-<br>domi-<br>nant |
| 5301 Group I. Function: Upward rotation of scapula; elevation of arm above shoulder level. Extrinsic muscles of shoulder girdle: (1) Trapezius; (2) levator scapulae; (3) serratus magnus.  Severe   | 40<br>30            | 30<br>20              |
| Moderate Slight Group II. Function: Depression of arm from vertical overhead to hanging at side (1, 2); downward rotation of scapula (3, 4); 1 and 2 act with Group III in forward and backward swing of arm. Extrinsic muscles of shoulder girdle: (1) Pectoralis major II (costosternal); (2) latissimus dorsi and teres major (teres major, although technically an intrinsic muscle, is included with latissimus dorsi); (3) pectoralis minor; (4) rhomboid. | 10 0                | 10<br>0               |
| Severe Moderately Severe Moderate Slight   | 40<br>30<br>20<br>0 | 30<br>20<br>20<br>0   |

[62 FR 30239, June 3, 1997, as amemded 85 FR 76464, Nov. 30, 20201

THE ORGANS OF SPECIAL SENSE

#### §4.75 General considerations for evaluating visual impairment.

(a) Visual impairment. The evaluation of visual impairment is based on impairment of visual acuity (excluding developmental errors of refraction), visual field, and muscle function.

(b) Examination for visual impairment. The examination must be conducted by a licensed optometrist or by a licensed ophthalmologist. The examiner must identify the disease, injury, or other

pathologic process responsible for any visual impairment found. Examinations of visual fields or muscle function will be conducted only when there is a medical indication of disease or injury that may be associated with visual field defect or impaired muscle function. Unless medically contra-indicated, the fundus must be examined with the claimant's pupils dilated.

- (c) Service-connected visual impairment of only one eye. Subject to the provisions of 38 CFR 3.383(a), if visual impairment of only one eye is serviceconnected, the visual acuity of the other eye will be considered to be 20/40 for purposes of evaluating the serviceconnected visual impairment.
- (d) Maximum evaluation for visual impairment of one eye. The evaluation for visual impairment of one eye must not exceed 30 percent unless there is anatomical loss of the eye. Combine the evaluation for visual impairment of one eye with evaluations for other disabilities of the same eye that are not based on visual impairment (e.g., disfigurement under diagnostic code 7800).
- (e) Anatomical loss of one eye with inability to wear a prosthesis. When the claimant has anatomical loss of one eye and is unable to wear a prosthesis, increase the evaluation for visual acuity under diagnostic code 6063 by 10 percent, but the maximum evaluation for visual impairment of both eyes must not exceed 100 percent. A 10-percent increase under this paragraph precludes an evaluation under diagnostic code 7800 based on gross distortion or asymmetry of the eve but not an evaluation under diagnostic code 7800 based on other characteristics of disfigurement.
- (f) Special monthly compensation. When evaluating visual impairment, refer to 38 CFR 3.350 to determine whether the claimant may be entitled to special monthly compensation. Footnotes in the schedule indicate levels of visual impairment that potentially establish entitlement to special monthly compensation; however, other levels of visual impairment combined with disabilities of other body systems may also establish entitlement.

(Authority: 38 U.S.C. 1114 and 1155)

[73 FR 66549, Nov. 10, 2008]

#### §4.76 Visual acuity.

- (a) Examination of visual acuity. Examination of visual acuity must include the central uncorrected and corrected visual acuity for distance and near vision using Snellen's test type or its equivalent.
- (b) Evaluation of visual acuity. (1) Evaluate central visual acuity on the basis of corrected distance vision with central fixation, even if a central scotoma is present. However, when the lens required to correct distance vision in the poorer eye differs by more than three diopters from the lens required to correct distance vision in the better eye (and the difference is not due to congenital or developmental refractive error), and either the poorer eye or both eves are service connected, evaluate the visual acuity of the poorer eye using either its uncorrected or corrected visual acuity, whichever results in better combined visual acuity.
- (2) Provided that he or she customarily wears contact lenses, evaluate the visual acuity of any individual affected by a corneal disorder that results in severe irregular astigmatism that can be improved more by contact lenses than by eyeglass lenses, as corrected by contact lenses.
- (3) In any case where the examiner reports that there is a difference equal to two or more scheduled steps between

near and distance corrected vision, with the near vision being worse, the examination report must include at least two recordings of near and distance corrected vision and an explanation of the reason for the difference. In these cases, evaluate based on corrected distance vision adjusted to one step poorer than measured.

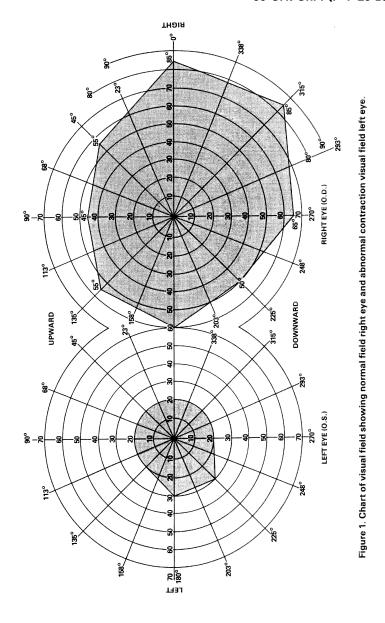

(4) To evaluate the impairment of visual acuity where a claimant has a reported visual acuity that is between two sequentially listed visual acuities, use the visual acuity which permits the higher evaluation.

(Authority: 38 U.S.C. 1155) [73 FR 66549, Nov. 10, 2008]

#### § 4.76a Computation of average concentric contraction of visual fields.

TABLE III—NORMAL VISUAL FIELD EXTENT AT 8
PRINCIPAL MERIDIANS

| Meridian        | Normal de-<br>grees |
|-----------------|---------------------|
| Temporally      | 85                  |
| Down temporally | 85                  |
| Down            | 65                  |
| Down nasally    | 50                  |
| Nasally         | 60                  |
| Up nasally      | 55                  |
| Up              | 45                  |
| Up temporally   | 55                  |
| Total           | 500                 |

TS-19 52a

Example of computation of concentric contraction under the schedule with abnormal findings taken from Figure 1.

| Loss            | Degrees |
|-----------------|---------|
| Temporally      | 55      |
| Down temporally | 55      |
| Down            | 45      |

#### **Department of Veterans Affairs**

| Loss          | Degrees |
|---------------|---------|
| Down nasally  | 30      |
| Nasally       | 40      |
| Up nasally    | 35      |
| Up            | 25      |
| Up temporally | 35      |
| Total loss    | 320     |

Remaining field 500° minus 320° = 180°. 180°  $\div$  8 = 22½° average concentric contraction.

(Authority: 38 U.S.C. 1155)

[43 FR 45352, Oct. 2, 1978, as amended at 73 FR 66549, Nov. 10, 2008]

#### § 4.77 Visual fields.

(a) Examination of visual fields. Examiners must use either Goldmann kinetic perimetry or automated perimetry using Humphrey Model 750, Octopus Model 101, or later versions of these perimetric devices with simulated kinetic Goldmann testing capability. For phakic (normal) individuals, as well as for pseudophakic or aphakic individuals who are well adapted to intraocular lens implant or contact lens correction, visual field examinations must be conducted using a standard target size and luminance, Goldmann's equivalent which III/4e. For aphakic individuals not well adapted to correction contact lens Or pseudophakic individuals not adapted to intraocular lens implant. visual field examinations must be conducted using Goldmann's equivalent

IV/4e. The examiner must document the results for at least 16 meridians 221/2 degrees apart for each eye and indicate the Goldmann equivalent used. See Table III for the normal extent (in degrees) of the visual fields at the 8 principal meridians (45 degrees apart). When the examiner indicates that additional testing is necessary to evaluate visual fields, the additional testing must be conducted using either a tangent screen or a 30-degree threshold visual field with the Goldmann III stimulus size. The examination report must document the results of either the tangent screen or of the 30-degree threshold visual field with the Goldmann III stimulus size.

- (b) Evaluation of visual fields. Determine the average concentric contraction of the visual field of each eye by measuring the remaining visual field (in degrees) at each of eight principal meridians 45 degrees apart, adding them, and dividing the sum by eight.
- (c) Combination of visual field defect and decreased visual acuity. To determine the evaluation for visual impairment when both decreased visual acuity and visual field defect are present in one or both eyes and are service connected, separately evaluate the visual acuity and visual field defect (expressed as a level of visual acuity), and combine them under the provisions of § 4.25.

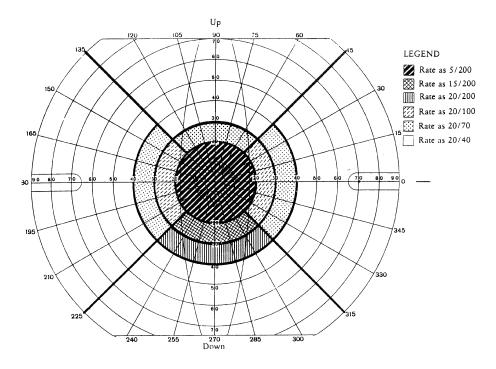

Figure 2. Goldmann Perimeter Chart

52c

(Authority: 38 U.S.C. 1155)

[53 FR 30262, Aug. 11, 1988, as amended at 73 FR 66549, Nov. 10, 2008; 74 FR 7648, Feb. 19, 2009; 83 FR 15320, Apr. 10, 2018]

#### § 4.78 Muscle function.

(a) Examination of muscle function. The examiner must use a Goldmann perimeter chart or the Tangent Screen method that identifies the four major quadrants (upward, downward, left, and right lateral) and the central field (20 degrees or less) (see Figure 2). The examiner must document the results of muscle function testing by identifying the quadrant(s) and range(s) of degrees in which diplopia exists.

(b) Evaluation of muscle function. (1) An evaluation for diplopia will be assigned to only one eye. When a claimant has both diplopia and decreased

visual acuity or visual field defect, assign a level of corrected visual acuity for the poorer eye (or the affected eye, if disability of only one eye is serviceconnected) that is: one step poorer than it would otherwise warrant if the evaluation for diplopia under diagnostic code 6090 is 20/70 or 20/100; two steps poorer if the evaluation under diagnostic code 6090 is 20/200 or 15/200; or three steps poorer if the evaluation under diagnostic code 6090 is 5/200. This adjusted level of corrected visual acuity, however, must not exceed a level of 5/200. Use the adjusted visual acuity for the poorer eye (or the affected eye, if

#### **Department of Veterans Affairs**

disability of only one eye is service-connected), and the corrected visual acuity for the better eye (or visual acuity of 20/40 for the other eye, if only one eye is service-connected) to determine the percentage evaluation for visual impairment under diagnostic codes 6065 through 6066.

(2) When diplopia extends beyond more than one quadrant or range of degrees, evaluate diplopia based on the quadrant and degree range that provides the highest evaluation.

(3) When diplopia exists in two separate areas of the same eye, increase the equivalent visual acuity under diagnostic code 6090 to the next poorer level of visual acuity, not to exceed 5/200.

(Authority: 38 U.S.C. 1155)

#### § 4.79 Schedule of ratings—eye.

#### DISEASES OF THE EYE

|       |  | Rating |
|-------|--|--------|
| Gener | al Rating Formula for Diseases of the Eye:  Evaluate on the basis of either visual impairment due to the particular condition or on incapacitating episodes, whichever results in a higher evaluation With documented incapacitating episodes requiring 7 or more treatment visits for an eye condition during   |        |
|       | the past 12 months   | 60     |
|       | With documented incapacitating episodes requiring at least 5 but less than 7 treatment visits for an eye condition during the past 12 months   | 40     |
|       | With documented incapacitating episodes requiring at least 3 but less than 5 treatment visits for an eye condition during the past 12 months   | 20     |
|       | With documented incapacitating episodes requiring at least 1 but less than 3 treatment visits for an eye condition during the past 12 months   | 10     |
|       | Note (1): For the purposes of evaluation under 38 CFR 4.79, an incapacitating episode is an eye condition severe enough to require a clinic visit to a provider specifically for treatment purposes.  Note (2): Examples of treatment may include but are not limited to: Systemic immunosuppressants or biologic agents; intravitreal or periocular injections; laser treatments; or other surgical interventions.  Note (3): For the purposes of evaluating visual impairment due to the particular condition, refer to 38 CFR 4.75–4.78 and to §4.79, diagnostic codes 6061–6091. |        |
|       | Choroidopathy, including uveitis, iritis, cyclitis, or choroiditis.  |        |
|       | Keratopathy.   |        |
|       | Scleritis.   |        |
|       | Retinopathy or maculopathy not otherwise specified   |        |
|       | Intraocular hemorrhage.  Detachment of retina.   |        |
|       | Unhealed eye injury.   |        |
| 0003  | Note: This code includes orbital trauma, as well as penetrating or non-penetrating eye injury  |        |
| 6010  | Tuberculosis of eye:   |        |
|       | Active   | 100    |
| 0011  | Inactive: Evaluate under § 4.88c or § 4.89 of this part, whichever is appropriate.   |        |
| 6011  | Retinal scars, atrophy, or irregularities:  Localized scars, atrophy, or irregularities of the retina, unilateral or bilateral, that are centrally located and that result in an irregular, duplicated, enlarged, or diminished image  | 10     |
|       | Alternatively, evaluate based on the General Rating Formula for Diseases of the Eye, if this would result in a higher evaluation   | 10     |
| 6012  | Angle-closure glaucoma   |        |
| 2212  | Evaluate under the General Rating Formula for Diseases of the Eye. Minimum evaluation if continuous medication is required   | 10     |
| 6013  | Open-angle glaucoma  Evaluate under the General Rating Formula for Diseases of the Eye. Minimum evaluation if continuous   |        |
|       | medication is required   | 10     |
| 6014  | Malignant neoplasms of the eye, orbit, and adnexa (excluding skin): Malignant neoplasms of the eye, orbit, and adnexa (excluding skin) that require therapy that is comparable to those used for systemic malignancies, i.e., systemic chemotherapy, X-ray therapy more extensive than   |        |
|       | to the area of the eye, or surgery more extensive than enucleation   | 100    |
|       | Note: Continue the 100 percent rating beyond the cessation of any surgical, X-ray, antineoplastic chemotherapy, or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating will be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination will be subject to the provisions of §3.105(e) of this chapter. If   | 100    |
|       | there has been no local recurrence or metastasis, evaluate based on residuals  Malignant neoplasms of the eye, orbit, and adnexa (excluding skin) that do not require therapy comparable   |        |
|       | to that for systemic malignancies:  Separately evaluate visual and nonvisual impairment, e.g., disfigurement (diagnostic code 7800), and combine the evaluations.  |        |
| 6015  | Benign neoplasms of the eye, orbit, and adnexa (excluding skin):   |        |

## DISEASES OF THE EYE-Continued

|              |  | Rating   |
|--------------|--|----------|
|              | Separately evaluate visual and nonvisual impairment, e.g., disfigurement (diagnostic code 7800), and combine the evaluations   |          |
|              | Nystagmus, central   | 10       |
| 6017         | Trachomatous conjunctivitis:  Active: Evaluate under the General Rating Formula for Diseases of the Eye, minimum rating  | 30       |
| 6018         | Chronic conjunctivitis (nontrachomatous):  Active: Evaluate under the General Rating Formula for Diseases of the Eye, minimum rating   | 10       |
| 6019         | Inactive: Evaluate based on residuals, such as visual impairment and disfigurement (diagnostic code 7800) Ptosis, unilateral or bilateral:   |          |
| 6020         | Evaluate based on visual impairment or, in the absence of visual impairment, on disfigurement (diagnostic code 7800).  Ectropion:  |          |
|              | Bilateral  | 20<br>10 |
| 6021         | Entropion: Bilateral Unilateral  | 20<br>10 |
| 6022         | Lagophthalmos:<br>Bilateral  | 20       |
| cooo         | Unilateral   | 10       |
|              | Loss of eyebrows, complete, unilateral or bilateral  | 10<br>10 |
|              | Disorders of the lacrimal apparatus (epiphora, dacryocystitis, etc.):  Bilateral   | 20       |
|              | Unilateral   | 10       |
| 6026         |  |          |
| 6027         | Cataract: Preoperative: Evaluate under the General Rating Formula for Diseases of the Eye Postoperative: If a replacement lens is present (pseudophakia), evaluate under the General Rating Formula for Diseases of the Eye. If there is no replacement lens, evaluate based on aphakia (diagnostic code 6029) |          |
| 6029         | Aphakia or dislocation of crystalline lens:  Evaluate based on visual impairment, and elevate the resulting level of visual impairment one step.  Minimum (unilateral or bilateral)  | 30       |
|              | Paralysis of accommodation (due to neuropathy of the Oculomotor Nerve (cranial nerve III)).  Loss of eyelids, partial or complete:  Separately evaluate both visual impairment due to eyelid loss and nonvisual impairment, e.g., disfigurement  | 20       |
| 6034         | (diagnostic code 7800), and combine the evaluations.  Pterygium:  Evaluate under the General Rating Formula for Diseases of the Eye, disfigurement (diagnostic code 7800),   |          |
| 6025         | conjunctivitis (diagnostic code 6018), etc., depending on the particular findings, and combine in accordance with § 4.25 Keratoconus   |          |
| 6036         | Status post corneal transplant:  Evaluate under the General Rating Formula for Diseases of the Eye. Minimum, if there is pain,   |          |
| 6037         | photophobia, and glare sensitivity   | 10       |
| 6040<br>6042 | Diabetic retinopathy Retinal dystrophy (including retinitis pigmentosa, wet or dry macular degeneration, early-onset macular de-   |          |
|              | eration, rod and/or cone dystrophy) Post-chiasmal disorders  |          |
|              | Impairment of Central Visual Acuity  |          |
| 6061         | Anatomical loss of both eyes <sup>1</sup>  | 100      |
| 6062<br>6063 | No more than light perception in both eyes <sup>1</sup>  | 100      |

### $\S\S4.80-4.84$ [Reserved]

IMPAIRMENT OF AUDITORY ACUITY

## \$4.85 Evaluation of hearing impairment.

(a) An examination for hearing impairment for VA purposes must be conducted by a state-licensed audiologist

and must include a controlled speech discrimination test (Maryland CNC) and a puretone audiometry test. Examinations will be conducted without the use of hearing aids.

(b) Table VI, "Numeric Designation of Hearing Impairment Based on Puretone Threshold Average and Speech Discrimination," is used to determine a Roman numeral designation (I through XI) for hearing impairment based on a combination of the percent of speech discrimination (horizontal rows) and the puretone threshold average (vertical columns). The Roman numeral designation is located at the point where the percentage of speech discrimination and puretone threshold average intersect.

- (c) Table VIa, "Numeric Designation of Hearing Impairment Based Only on Puretone Threshold Average," is used to determine a Roman numeral designation (I through XI) for hearing impairment based only on the puretone threshold average. Table VIa will be used when the examiner certifies that use of the speech discrimination test is not appropriate because of language difficulties, inconsistent speech discrimination scores, etc., or when indicated under the provisions of §4.86.
- (d) "Puretone threshold average," as used in Tables VI and VIa, is the sum of the puretone thresholds at 1000, 2000, 3000 and 4000 Hertz, divided by four. This average is used in all cases (including those in §4.86) to determine the

Roman numeral designation for hearing impairment from Table VI or VIa.

- (e) Table VII, "Percentage Evaluations for Hearing Impairment," is used to determine the percentage evaluation by combining the Roman numeral designations for hearing impairment of each ear. The horizontal rows represent the ear having the better hearing and the vertical columns the ear having the poorer hearing. The percentage evaluation is located at the point where the row and column intersect.
- (f) If impaired hearing is service-connected in only one ear, in order to determine the percentage evaluation from Table VII, the non-service-connected ear will be assigned a Roman Numeral designation for hearing impairment of I, subject to the provisions of §3.383 of this chapter.
- (g) When evaluating any claim for impaired hearing, refer to §3.350 of this chapter to determine whether the veteran may be entitled to special monthly compensation due either to deafness, or to deafness in combination with other specified disabilities.
  - (h) Numeric tables VI, VIA\*, and VII.

## § 4.86 Exceptional patterns of hearing impairment.

(a) When the puretone threshold at each of the four specified frequencies (1000, 2000, 3000, and 4000 Hertz) is 55 decibels or more, the rating specialist will determine the Roman numeral designation for hearing impairment from either Table VI or Table VIa, whichever results in the higher nu-

meral. Each ear will be evaluated separately.

(b) When the puretone threshold is 30 decibels or less at 1000 Hertz, and 70 decibels or more at 2000 Hertz, the rating specialist will determine the Roman numeral designation for hearing impairment from either Table VI or Table VIa, whichever results in the higher numeral. That numeral will then be elevated to the next higher

Roman numeral. Each ear will be evaluated separately.

|      | As active disease   | 100    |
|      | Note 1: Continue a 100 percent evaluation beyond the cessation of treatment for active disease. Six months after discontinuance of such treatment, determine the appropriate disability rating by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter. Thereafter, rate under the appropriate body system any residual disability of infection, which includes, but is not limited to liver damage and bone marrow disease.                |        |
|      | Note 2: Confirm the recurrence of active infection by culture, histopathology, or other diagnostic laboratory testing.  |        |
| 3302 | Leprosy (Hansen's disease):   |        |
| 2002 | As active disease   | 100    |
|      | Note: Continue a 100 percent evaluation beyond the cessation of treatment for active disease. Six months after discontinuance of such treatment, determine the appropriate disability rating by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter. Thereafter, rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, skin lesions, peripheral neuropathy, or amputations. |        |
| 304  | Malaria:  |        |
|      | Evaluate under the General Rating Formula.  Note 1: The diagnosis of malaria, both initially and during relapse, depends on the identification of the malarial parasites in blood smears or other specific diagnostic laboratory tests such as antigen detection, immunologic (immunochromatographic) tests, and molecular testing such as polymerase chain reaction tests.   |        |
|      | Note 2: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, liver or splenic damage, and central nervous system conditions.   |        |
| 305  | Lymphatic filariasis, to include elephantiasis:  Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, epididymitis, lymphangitis, lymphatic obstruction, or lymphedema affecting extremities, genitals, and/or breasts.  |        |
| 3306 | Bartonellosis:  |        |
|      | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, endocarditis or skin lesions.   |        |
| 3307 | Plague: Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection.  |        |
| 2000 |   |        |
| 308  | Relapsing Fever:  |        |

|      |   | Ratir |
|------|---|-------|
|      | Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not   |       |
| 2000 | limited to, liver or spleen damage, iritis, uveitis, or central nervous system involvement.   |       |
| 309  | Rheumatic fever:  Evaluate under the General Rating Formula.  |       |
|      | Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not   |       |
|      | limited to, heart damage.   |       |
| 310  | Syphilis, and other treponema infections:   |       |
|      | Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, diseases of the nervous system, vascular system, eyes, or ears (see DC 7004, DC 8013, DC  |       |
| 044  | 8014, DC 8015, and DC 9301).  |       |
| 311  | Tuberculosis, miliary:  | 1     |
|      | As active disease   | '     |
|      | Note 1: Confirm the recurrence of active infection by culture, histopathology, or other diagnostic laboratory testing.  |       |
| .040 | Note 2: Rate under the appropriate body system any residual disability of infection which includes, but is not limited to, skin conditions and conditions of the respiratory, central nervous, musculoskeletal, ocular, gastro-intestinal, and genitourinary systems and those residuals listed in §4.88c.  |       |
| 312  | Nontuberculosis mycobacterium infection: As active disease  | 1     |
|      | Note 1: Continue the rating of 100 percent for the duration of treatment for active disease followed by a man-<br>datory VA exam. If there is no relapse, rate on residuals. Any change in evaluation based upon that or any<br>subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter.<br>Note 2: Confirm the recurrence of active infection by culture, histopathology, or other diagnostic laboratory |       |
|      | testing.  |       |
|      | Note 3. Rate under the appropriate body system any residual disability of infection which includes, but is not limited to, skin conditions and conditions of the respiratory, central nervous, musculoskeletal, ocular, gastro-intestinal, and genitourinary systems and those residuals listed in §4.88c.  |       |
| 313  | Avitaminosis:  Marked mental changes, maint darmetitis, inability to ratein adequate neurichment, exhaustion, and eachevie  | 1     |
|      | Marked mental changes, moist dermatitis, inability to retain adequate nourishment, exhaustion, and cachexia With all of the symptoms listed below, plus mental symptoms and impaired bodily vigor   | '     |
|      | With stomatitis, diarrhea, and symmetrical dermatitis   |       |
|      | With stomatitis, or achlorhydria, or diarrhea   |       |
|      | Confirmed diagnosis with nonspecific symptoms such as: decreased appetite, weight loss, abdominal discom-   |       |
|      | fort, weakness, inability to concentrate and irritability   |       |
| 314  | Beriberi:   |       |
|      | As active disease:  |       |
|      | With congestive heart failure, anasarca, or Wernicke-Korsakoff syndrome   | 1     |
|      | weakness, fatigue, anorexia, dizziness, heaviness and stiffness of legs, headache or sleep disturbance  |       |
|      | Thereafter rate residuals under the appropriate body system.  |       |
| 315  | Pellagra:   |       |
|      | Marked mental changes, moist dermatitis, inability to retain adequate nourishment, exhaustion, and cachexia   |       |
|      | With all of the symptoms listed below, plus mental symptoms and impaired bodily vigor   |       |
|      | With stomatitis, diarrhea, and symmetrical dermatitis   |       |
|      | With stomatitis, or achlorhydria, or diarrhea   |       |
|      | Confirmed diagnosis with nonspecific symptoms such as: decreased appetite, weight loss, abdominal discom-   |       |
| 210  | fort, weakness, inability to concentrate and irritability   |       |
| 316  | Brucellosis:  |       |
|      | Evaluate under the General Rating Formula.  Note 1: Culture, serologic testing, or both must confirm the initial diagnosis and recurrence of active infection.  |       |
|      | Note 2: Rate under the appropriate body system any residual disability of infection, which includes, but is not   |       |
|      | limited to, meningitis, liver, spleen and musculoskeletal conditions.   |       |
| 317  | Rickettsial, ehrlichia, and anaplasma infections:   |       |
|      | Evaluate under the General Rating Formula.  |       |
|      | Note 1: Rate under the appropriate body system any residual disability of infection, which includes, but is not   |       |
|      | limited to, bone marrow, spleen, central nervous system, and skin conditions.   |       |
|      | Note 2: This diagnostic code includes, but is not limited to, scrub typhus, Rickettsial pox, African tick-borne   |       |
| 240  | fever, Rocky Mountain spotted fever, ehrlichiosis, or anaplasmosis.   |       |
| 310  | Melioidosis:  Evaluate under the General Pating Formula   |       |
|      | Evaluate under the General Rating Formula.  Note 1: Confirm by culture or other specific diagnostic laboratory tests the initial diagnosis and any relapse or chronic activity of infection.  |       |
|      | Note 2: Rate under the appropriate body system any residual disability of infection, which includes, but is not   |       |
|      |   |       |
|      | ilmited to, arthritis, lund lesions, or meninditis.   |       |
| 319  | limited to, arthritis, lung lesions, or meningitis. Lyme disease:   |       |
| 319  | Ilmited to, arrinriis, lung lesions, or meningitis. Lyme disease: Evaluate under the General Rating Formula.  |       |
| 319  | Lyme disease:   |       |
| 319  | Lyme disease:  Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, arthritis, Bell's palsy, radiculopathy, ocular, or cognitive dysfunction.  |       |
| 319  | Lyme disease:  Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, arthritis, Bell's palsy, radiculopathy, ocular, or cognitive dysfunction.  Parasitic diseases otherwise not specified:   |       |
|      | Lyme disease:  Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not limited to, arthritis, Bell's palsy, radiculopathy, ocular, or cognitive dysfunction.  |       |

Rating

|     |  | nai |
|-----|--|-----|
|     | As active disease  |     |
|     | Note: Continue the rating of 100 percent through active disease followed by a mandatory VA exam. If there is no relapse, rate on residual disability. Any change in evaluation based upon that or any subsequent exam- |     |
| 200 | ination shall be subject to the provisions of §3.105(e) of this chapter.   |     |
| 320 | Schistosomiasis: As acute or asymptomatic chronic disease  |     |
|     | Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, conditions of the liver, intestinal system, female genital tract, genitourinary tract, or central nerv-  |     |
| 200 | ous system.  |     |
| 29  | Hemorrhagic fevers, including dengue, yellow fever, and others:  Evaluate under the General Rating Formula.  |     |
|     | Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, conditions of the central nervous system, liver, or kidney.  |     |
| 30  | Campylobacter jejuni infection:  |     |
|     | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, Guillain-Barre syndrome, reactive arthritis, or uveitis.   |     |
| 31  | Coxiella burnetii infection (Q fever):   |     |
|     | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, chronic hepatitis, endocarditis, osteomyelitis, post Q-fever chronic fatigue syndrome, or vascular   |     |
|     | infections.  |     |
| 33  | Nontyphoid salmonella infections:  |     |
|     | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, reactive arthritis.  |     |
| 34  | Shigella infections:   |     |
|     | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, hemolytic-uremic syndrome or reactive arthritis.   |     |
| 35  | West Nile virus infection:   |     |
|     | Evaluate under the General Rating Formula.  Note: Rate under the appropriate body system any residual disability of infection, which includes, but is not  |     |
|     | limited to, variable physical, functional, or cognitive disabilities.  |     |
| 50  | Lupus erythematosus, systemic (disseminated):  |     |
|     | Not to be combined with ratings under DC 7809 Acute, with frequent exacerbations, producing severe impair-   |     |
|     | ment of health  Exacerbations lasting a week or more, 2 or 3 times per year  |     |
|     | Exacerbations once or twice a year or symptomatic during the past 2 years  |     |
|     | NOTE: Evaluate this condition either by combining the evaluations for residuals under the appropriate system,  |     |
|     | or by evaluating DC 6350, whichever method results in a higher evaluation.   |     |
| 51  | HIV-related illness:  AIDS with recurrent opportunistic infections (see Note 3) or with secondary diseases afflicting multiple body  |     |
|     | systems; HIV-related illness with debility and progressive weight loss   |     |
|     | Refractory constitutional symptoms, diarrhea, and pathological weight loss; or minimum rating following devel-   |     |
|     | opment of AIDS-related opportunistic infection or neoplasm   |     |
|     | Recurrent constitutional symptoms, intermittent diarrhea, and use of approved medication(s); or minimum rating with T4 cell count less than 200  |     |
|     | Following development of HIV-related constitutional symptoms; T4 cell count between 200 and 500; use of  |     |
|     | approved medication(s); or with evidence of depression or memory loss with employment limitations  |     |
|     | Asymptomatic, following initial diagnosis of HIV infection, with or without lymphadenopathy or decreased T4 cell count   |     |
|     | Note 1: In addition to standard therapies and regimens, the term "approved medication(s)" includes treatment   |     |
|     | regimens and medications prescribed as part of a research protocol at an accredited medical institution.   |     |
|     | Note 2: Diagnosed psychiatric illness, central nervous system manifestations, opportunistic infections, and  |     |
|     | neoplasms may be rated separately under the appropriate diagnostic codes if a higher overall evaluation results, provided the disability symptoms do not overlap with evaluations otherwise assignable above.          |     |
|     | Note 3: The following list of opportunistic infections are considered AIDS-defining conditions, that is, a diag-   |     |
|     | nosis of AIDS follows if a person has HIV and one more of these infections, regardless of the CD4 count—   |     |
|     | candidiasis of the bronchi, trachea, esophagus, or lungs; invasive cervical cancer; coccidioidomycosis; cryptococcosis; cryptosporidiosis; cytomegalovirus (particularly CMV retinitis); HIV-related encephalopathy;   |     |
|     | herpes simplex-chronic ulcers for greater than one month, or bronchitis, pneumonia, or esophagitis;  |     |
|     | histoplasmosis; isosporiasis (chronic intestinal); Kaposi's sarcoma; lymphoma; mycobacterium avium com-  |     |
|     | plex; tuberculosis; pneumocystis jirovecii (carinii) pneumonia; pneumonia, recurrent; progressive multifocal   |     |
|     | leukoencephalopathy; salmonella septicemia, recurrent; toxoplasmosis of the brain; and wasting syndrome due to HIV.  |     |
| 54  | Chronic fatique syndrome (CFS):  |     |
| •   | Debilitating fatigue, cognitive impairments (such as inability to concentrate, forgetfulness, or confusion), or a  |     |
|     | combination of other signs and symptoms:   |     |
|     | Which are nearly constant and so severe as to restrict routine daily activities almost completely and which may occasionally preclude self-care  |     |
|     | Which are nearly constant and restrict routine daily activities to less than 50 percent of the pre-illness   |     |
|     | Which are hearly constant and restrict routine daily activities to less than 50 percent of the pre-limess  |     |
|     | level; or which wax and wane, resulting in periods of incapacitation of at least six weeks total dura-<br>tion per year  |     |

#### §4.88c

|   | Rating         |
|---|----------------|
| Which are nearly constant and restrict routine daily activities from 50 to 75 percent of the pre-illness level; or which wax and wane, resulting in periods of incapacitation of at least four but less than six weeks total duration per year.  Which are nearly constant and restrict routine daily activities by less than 25 percent of the pre-illness level; or which wax and wane, resulting in periods of incapacitation of at least two but less than four weeks total duration per year.  Which wax and wane but result in periods of incapacitation of at least one but less than two weeks total duration per year; or symptoms controlled by continuous medication | 40<br>20<br>10 |

#### § 4.88c Ratings for inactive nonpulmonary tuberculosis initially entitled after August 19, 1968.

|  | ing |
|--|-----|
| For 1 year after date of inactivity, following active tu-<br>berculosis  | 100 |
| Thereafter: Rate residuals under the specific body system or systems affected.   |     |
| Following the total rating for the 1 year period after date of inactivity, the schedular evaluation for residuals of nonpulmonary tuberculosis, <i>i.e.</i> , ankylosis, surgical removal of a part, etc., will be assigned under the appropriate diagnostic code for the residual preceded by the diagnostic code for tuberculosis of the body part affected. For example, tuberculosis of the hip joint with residual ankylosis would be coded 5001–5250. Where there are existing residuals of pulmonary and nonpulmonary conditions, the evaluations for residual separate functional impairment may be combined. Where there are existing pulmonary and nonpulmonary conditions, the total rating for the 1 year, after attainment of inactivity, may not be applied to both conditions during the same period. However, the total rating during the 1-year period for the pulmonary or for the nonpulmonary condition will be utilized, combined with evaluation for residuals of the condition not covered by the 1-year total evaluation, so as to allow any additional benefit provided during such period. |     |

#### § 4.89 Ratings for inactive nonpulmonary tuberculosis in effect on August 19, 1968.

Public Law 90–493 repealed section 356 of title 38, United States Code which provided graduated ratings for inactive tuberculosis. The repealed section, however, still applies to the case of any veteran who on August 19, 1968, was receiving or entitled to receive compensation for tuberculosis. The use of the protective provisions of Pub. L. 90–493 should be mentioned in the discussion portion of all ratings in which these provisions are applied. For use in

rating cases in which the protective provisions of Pub. L. 90–493 apply, the former evaluations are retained in this section.

|   | Rat-<br>ing    |
|---|----------------|
| For 2 years after date of inactivity, following active tuberculosis, which was clinically identified during service or subsequently | 1000 500 300 0 |

[29 FR 6718, May 22, 1964, as amended at 34 FR 5062, Mar. 11, 1969; 43 FR 45361, Oct. 2, 1978]

THE RESPIRATORY SYSTEM

# § 4.96 Special provisions regarding evaluation of respiratory conditions

- (a) Rating coexisting respiratory conditions. Ratings under diagnostic codes 6600 through 6817 and 6822 through 6847 will not be combined with each other. Where there is lung or pleural involvement, ratings under diagnostic codes 6819 and 6820 will not be combined with each other or with diagnostic codes 6600 through 6817 or 6822 through 6847. A single rating will be assigned under the diagnostic code which reflects the predominant disability with elevation to the next higher evaluation where the severity of the overall disability warrants such elevation. However, in cases protected by the provisions of Pub. L. 90-493, the graduated ratings of 50 and 30 percent for inactive tuberculosis will not be elevated.
- (b) Rating "protected" tuberculosis cases. Public Law 90-493 repealed section 356 of title 38. United States Code which had provided graduated ratings for inactive tuberculosis. The repealed section, however, still applies to the case of any veteran who on August 19, 1968, was receiving or entitled to receive compensation for tuberculosis. The use of the protective provisions of Pub. L. 90-493 should be mentioned in the discussion portion of all ratings in which these provisions are applied. For application in rating cases in which the protective provisions of Pub. L. 90-493 apply the former evaluations pertaining to pulmonary tuberculosis are retained in §4.97.
- (c) Special monthly compensation. When evaluating any claim involving complete organic aphonia, refer to §3.350 of this chapter to determine whether the veteran may be entitled to special monthly compensation. Footnotes in the schedule indicate conditions which potentially establish entitlement to special monthly compensation; however, there are other conditions in this section which under certain circumstances also establish entitlement to special monthly compensation.
- (d) Special provisions for the application of evaluation criteria for diagnostic codes 6600, 6603, 6604, 6825–6833, and 6840–

- 6845. (1) Pulmonary function tests (PFT's) are required to evaluate these conditions except:
- (i) When the results of a maximum exercise capacity test are of record and are 20 ml/kg/min or less. If a maximum exercise capacity test is not of record, evaluate based on alternative criteria.
- (ii) When pulmonary hypertension (documented by an echocardiogram or cardiac catheterization), cor pulmonale, or right ventricular hypertrophy has been diagnosed.
- (iii) When there have been one or more episodes of acute respiratory fail-
- (iv) When outpatient oxygen therapy is required.
- (2) If the DLCO (SB) (Diffusion Capacity of the Lung for Carbon Monoxide by the Single Breath Method) test is not of record, evaluate based on alternative criteria as long as the examiner states why the test would not be useful or valid in a particular case.
- (3) When the PFT's are not consistent with clinical findings, evaluate based on the PFT's unless the examiner states why they are not a valid indication of respiratory functional impairment in a particular case.
- (4) Post-bronchodilator studies are required when PFT's are done for disability evaluation purposes except when the results of pre-bronchodilator pulmonary function tests are normal or when the examiner determines that post-bronchodilator studies should not be done and states why.
- (5) When evaluating based on PFT's, use post-bronchodilator results in applying the evaluation criteria in the rating schedule unless the post-bronchodilator results were poorer than the pre-bronchodilator results. In those cases, use the pre-bronchodilator values for rating purposes.
- (6) When there is a disparity between the results of different PFT's (FEV-1 (Forced Expiratory Volume in one second), FVC (Forced Vital Capacity), etc.), so that the level of evaluation would differ depending on which test result is used, use the test result that the examiner states most accurately reflects the level of disability.
- (7) If the FEV-1 and the FVC are both greater than 100 percent, do not assign

a compensable evaluation based on a decreased FEV–1/FVC ratio.

## §4.97 Schedule of ratings—respiratory system.

|                              |   | Ratir |
|------------------------------|---|-------|
|                              | DISEASES OF THE NOSE AND THROAT   |       |
|                              | Septum, nasal, deviation of: Traumatic only, With 50-percent obstruction of the nasal passage on both sides or complete obstruction on one side Nose, loss of part of, or scars: Exposing both nasal passages Loss of part of one ala, or other obvious disfigurement   |       |
| lote:                        | Or evaluate as DC 7800, scars, disfiguring, head, face, or neck.  |       |
| 5510<br>5511<br>5512<br>5513 | Sinusitis, pansinusitis, chronic. Sinusitis, ethmoid, chronic. Sinusitis, frontal, chronic.   |       |
|                              | Three or more incapacitating episodes per year of sinusitis requiring prolonged (lasting four to six weeks) antibiotic treatment, or; more than six non-incapacitating episodes per year of sinusitis characterized by headaches, pain, and purulent discharge or crusting  One or two incapacitating episodes per year of sinusitis requiring prolonged (lasting four to six weeks) antibiotic treatment, or; three to six non-incapacitating episodes per year of sinusitis characterized by headaches, pain, and purulent discharge or crusting  Detected by X-ray only                    |       |
|                              | Note: An incapacitating episode of sinusitis means one that requires bed rest and treatment by a physician.   |       |
|                              | Laryngitis, tuberculous, active or inactive. Rate under §§ 4.88c or 4.89, whichever is appropriate. Laryngitis, chronic:  |       |
| 0.0                          | Hoarseness, with thickening or nodules of cords, polyps, submucous infiltration, or pre-malignant changes on biopsy   |       |
|                              | Hoarseness, with inflammation of cords or mucous membrane Laryngectomy, total. Rate the residuals of partial laryngectomy as laryngitis (DC 6516), aphonia (DC 6519), or stenosis of larynx (DC 6520).  | 11    |
| 519                          | Aphonia, complete organic: Constant inability to communicate by speech Constant inability to speak above a whisper  | 1 1   |
|                              | Note: Evaluate incomplete aphonia as laryngitis, chronic (DC 6516).   |       |
| 3520                         | Larynx, stenosis of, including residuals of laryngeal trauma (unilateral or bilateral):  Forced expiratory volume in one second (FEV-1) less than 40 percent of predicted value, with Flow-Volume Loop compatible with upper airway obstruction, or; permanent tracheostomy  FEV-1 of 40- to 55-percent predicted, with Flow-Volume Loop compatible with upper airway obstruction  FEV-1 of 56- to 70-percent predicted, with Flow-Volume Loop compatible with upper airway obstruction  FEV-1 of 71- to 80-percent predicted, with Flow-Volume Loop compatible with upper airway obstruction | 1     |
|                              | Note: Or evaluate as aphonia (DC 6519).   |       |
| 521                          | Pharynx, injuries to: Stricture or obstruction of pharynx or nasopharynx, or; absence of soft palate secondary to trauma, chemical burn, or granulomatous disease, or; paralysis of soft palate with swallowing difficulty (nasal regurgitation) and speech impairment  |       |
| 522                          | With polyps   |       |
| 523                          | Without polyps, but with greater than 50-percent obstruction of nasal passage on both sides or complete obstruction on one side   |       |
|                              | Rhinoscleroma   |       |
| 524                          | both sides or complete obstruction on one side  |       |

|      | Woganar's granulamatasis, lothal midlino granulama   | 10            |
|------|--|---------------|
|      | Wegener's granulomatosis, lethal midline granuloma  Other types of granulomatous infection   | 10            |
|      | DISEASES OF THE TRACHEA AND BRONCHI  |               |
|      | DISEASES OF THE TRACTICA AND BRONCH  |               |
| 6600 | Bronchitis, chronic:  FEV-1 less than 40 percent of predicted value, or; the ratio of Forced Expiratory Volume in one second to Forced Vital Capacity (FEV-1/FVC) less than 40 percent, or; Diffusion Capacity of the Lung for Carbon Monoxide by the Single Breath Method (DLCO (SB)) less than 40-percent predicted, or; maximum exercise capacity less than 15 ml/kg/min oxygen consumption (with cardiac or respiratory limitation), or; cor pulmonale (right heart failure), or; right ventricular hypertrophy, or; pulmonary hypertension (shown by Echo or cardiac catheterization), or; episode(s) of acute respiratory failure, or; requires outpatient oxygen therapy FEV-1 of 40- to 55-percent predicted, or; FEV-1/FVC of 40 to 55 percent, or; DLCO (SB) of 40- to 55-percent predicted, or; naximum oxygen consumption of 15 to 20 ml/kg/min (with cardiorespiratory limit)   | 10<br>6<br>3  |
| 6601 | Bronchiectasis:  | '             |
|      | With incapacitating episodes of infection of at least six weeks total duration per year With incapacitating episodes of infection of four to six weeks total duration per year, or; near constant findings of cough with purulent sputum associated with anorexia, weight loss, and frank hemoptysis and requiring antibiotic usage almost continuously  | 10            |
|      | With incapacitating episodes of infection of two to four weeks total duration per year, or, daily productive cough with sputum that is at times purulent or blood-tinged and that requires prolonged (lasting four to six weeks) antibiotic usage more than twice a year   | 3             |
|      | Intermittent productive cough with acute infection requiring a course of antibiotics at least twice a year  Or rate according to pulmonary impairment as for chronic bronchitis (DC 6600).   | 1             |
|      | Note: An incapacitating episode is one that requires bedrest and treatment by a physician.   |               |
| 6602 | Asthma, bronchial:  FEV-1 less than 40-percent predicted, or; FEV-1/FVC less than 40 percent, or; more than one attack per week with episodes of respiratory failure, or; requires daily use of systemic (oral or parenteral) high dose corticosteroids or immuno-suppressive medications.  FEV-1 of 40- to 55-percent predicted, or; FEV-1/FVC of 40 to 55 percent, or; at least monthly visits to a physician for required care of exacerbations, or; intermittent (at least three per year) courses of systemic (oral or parenteral) corticosteroids.  FEV-1 of 56- to 70-percent predicted, or; FEV-1/FVC of 56 to 70 percent, or; daily inhalational or oral bronchodilator therapy, or; inhalational anti-inflammatory medication.  FEV-1 of 71- to 80-percent predicted, or; FEV-1/FVC of 71 to 80 percent, or; intermittent inhalational or oral bronchodilator therapy.   | 10<br>6<br>3  |
|      | Note: In the absence of clinical findings of asthma at time of examination, a verified history of asthmatic attacks must be of record.   |               |
| 6603 | Emphysema, pulmonary:  FEV-1 less than 40 percent of predicted value, or; the ratio of Forced Expiratory Volume in one second to Forced Vital Capacity (FEV-1/FVC) less than 40 percent, or; Diffusion Capacity of the Lung for Carbon Monoxide by the Single Breath Method (DLCO (SB)) less than 40-percent predicted, or; maximum exercise capacity less than 15 ml/kg/min oxygen consumption (with cardiac or respiratory limitation), or; cor pulmonale (right heart failure), or; right ventricular hypertrophy, or; pulmonary hypertension (shown by Echo or cardiac catheterization), or; episode(s) of acute respiratory failure, or; requires outpatient oxygen therapy.  FEV-1 of 40- to 55-percent predicted, or; FEV-1/FVC of 40 to 55 percent, or; DLCO (SB) of 40- to 55-percent predicted, or; maximum oxygen consumption of 15 to 20 ml/kg/min (with cardiorespiratory limit)  | 100<br>6<br>3 |
| 8604 | predicted  | 1             |
| 6604 | Chronic obstructive pulmonary disease:  FEV-1 less than 40 percent of predicted value, or; the ratio of Forced Expiratory Volume in one second to Forced Vital Capacity (FEV-1/FVC) less than 40 percent, or; Diffusion Capacity of the Lung for Carbon Monoxide by the Single Breath Method (DLCO (SB)) less than 40-percent predicted, or; maximum exercise capacity less than 15 ml/kg/min oxygen consumption (with cardiac or respiratory limitation), or; cor pulmonale (right heart failure), or; right ventricular hypertrophy, or; pulmonary hypertension (shown by Echo or cardiac catheterization), or; episode(s) of acute respiratory failure, or; requires outpatient oxygen therapy.  FEV-1 of 40- to 55-percent predicted, or; FEV-1/FVC of 40 to 55-percent, or; DLCO (SB) of 40- to 55-percent predicted, or; maximum oxygen consumption of 15 to 20 ml/kg/min (with cardiorespiratory limit)  FEV-1 of 56- to 70-percent predicted, or; FEV-1/FVC of 56 to 70 percent, or; DLCO (SB) 56- to 65-percent | 10            |
|      | predicted  | 1 1           |

|      | DISEASES OF THE LUNGS AND PLEURA—TUBERCULOSIS  |               |

|  |  | Rating     |
|--|--|------------|
| 6702<br>6703   | Tuberculosis, pulmonary, chronic, moderately advanced, active  Tuberculosis, pulmonary, chronic, minimal, active   | 100<br>100 |
| 6704   | Tuberculosis, pulmonary, chronic, active, advancement unspecified  | 100        |
| 6721   | Tuberculosis, pulmonary, chronic, far advanced, inactive.  |            |
| 6722<br>6723   | Tuberculosis, pulmonary, chronic, moderately advanced, inactive.  Tuberculosis, pulmonary, chronic, minimal, inactive.   |            |
| 6724   | Tuberculosis, pulmonary, chronic, inactive, advancement unspecified.   |            |
|  | General Rating Formula for Inactive Pulmonary Tuberculosis: For two years after date of inactivity, following active tuberculosis, which was clinically identified during service or subsequently  | 100        |
|  | Thereafter for four years, or in any event, to six years after date of inactivity  | 50         |
|  | Thereafter, for five years, or to eleven years after date of inactivity  | 30         |
|  | Following far advanced lesions diagnosed at any time while the disease process was active, minimum   | 30         |
|  | tion, impairment of health, etc  | 20         |
|  | Otherwise  | 0          |
| treated reports for the treate | (1): The 100-percent rating under codes 6701 through 6724 is not subject to a requirement of precedent hospital tment. It will be reduced to 50 percent for failure to submit to examination or to follow prescribed treatment upon ort to that effect from the medical authorities. When a veteran is placed on the 100-percent rating for inactive tuculosis, the medical authorities will be appropriately notified of the fact, and of the necessity, as given in footnote 138 U.S.C. 1156 (and formerly in 38 U.S.C. 356, which has been repealed by Public Law 90–493), to notify the erans Service Center in the event of failure to submit to examination or to follow treatment.  (2): The graduated 50-percent and 30-percent ratings and the permanent 30 percent and 20 percent ratings for titve pulmonary tuberculosis are not to be combined with ratings for other respiratory disabilities. Following acoplasty the rating will be for removal of ribs combined with the rating for collapsed lung. Resection of the ribs dent to thoracoplasty will be rated as removal. |            |
|  | Ratings for Pulmonary Tuberculosis Initially Evaluated After August 19, 1968   |            |
| 6730   | Tuberculosis, pulmonary, chronic, active   | 100        |
|  | Note: Active pulmonary tuberculosis will be considered permanently and totally disabling for non-service-con-  |            |
|  | nected pension purposes in the following circumstances:  (a) Associated with active tuberculosis involving other than the respiratory system.  |            |
|  | (b) With severe associated symptoms or with extensive cavity formation.  |            |
|  | (c) Reactivated cases, generally.  |            |
|  | <ul><li>(d) With advancement of lesions on successive examinations or while under treatment.</li><li>(e) Without retrogression of lesions or other evidence of material improvement at the end of six</li></ul>  |            |
|  | months hospitalization or without change of diagnosis from "active" at the end of 12 months hospitalization. Material improvement means lessening or absence of clinical symptoms, and X-ray findings of a stationary or retrogressive lesion.   |            |
| 6731   | Tuberculosis, pulmonary, chronic, inactive:  Depending on the specific findings, rate residuals as interstitial lung disease, restrictive lung disease, or, when obstructive lung disease is the major residual, as chronic bronchitis (DC 6600). Rate thoracoplasty as removal of ribs under DC 5297.   |            |
|  | <b>Note:</b> A mandatory examination will be requested immediately following notification that active tuberculosis evaluated under DC 6730 has become inactive. Any change in evaluation will be carried out under the provisions of §3.105(e).  |            |
| 6732   | Pleurisy, tuberculous, active or inactive: Rate under §§ 4.88c or 4.89, whichever is appropriate.  |            |
|  | NONTUBERCULOUS DISEASES  |            |
| 6817   | Pulmonary Vascular Disease:  |            |
| 0017   | Primary pulmonary hypertension, or; chronic pulmonary thromboembolism with evidence of pulmonary hypertension, right ventricular hypertrophy, or cor pulmonale, or; pulmonary hypertension secondary to other obstructive disease of pulmonary arteries or veins with evidence of right ventricular hypertrophy or corpulmonale  | 100        |
|  | Chronic pulmonary thromboembolism requiring anticoagulant therapy, or; following inferior vena cava surgery  | 100        |
|  | without evidence of pulmonary hypertension or right ventricular dysfunction  | 60         |
|  | Symptomatic, following resolution of acute pulmonary embolism  | 30<br>0    |
|  | Note: Evaluate other residuals following pulmonary embolism under the most appropriate diagnostic code, such as chronic bronchitis (DC 6600) or chronic pleural effusion or fibrosis (DC 6844), but do not combine that evaluation with any of the above evaluations.  |            |
| 6819   | Neoplasms, malignant, any specified part of respiratory system exclusive of skin growths   | 100        |
|  | Note: A rating of 100 percent shall continue beyond the cessation of any surgical, X-ray, antineoplastic chemotherapy or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter. If there has been no local recurrence or metastasis, rate on residuals.   |            |
|  |  |            |

|              |   | Rating   |
|--------------|---|----------|
|              | Bacterial Infections of the Lung  |          |
| 6822         | Actinomycosis.  |          |
| 6823         |   |          |

| 6829         | Drug-induced pulmonary pneumonitis and fibrosis.  |          |
| 6830         | Radiation-induced pulmonary pneumonitis and fibrosis.   |          |
| 6831<br>6832 | Hypersensitivity pneumonitis (extrinsic allergic alveolitis).  Pneumoconiosis (silicosis, anthracosis, etc.).   |          |
| 6833         | Asbestosis.   |          |
|              | General Rating Formula for Interstitial Lung Disease (diagnostic codes 6825 through 6833):  |          |
|              | Forced Vital Capacity (FVC) less than 50-percent predicted, or; Diffusion Capacity of the Lung for  |          |
|              | Carbon Monoxide by the Single Breath Method (DLCO (SB)) less than 40-percent predicted, or; maximum exercise capacity less than 15 ml/kg/min oxygen consumption with cardiorespiratory limi-      |          |
|              | tation, or; cor pulmonale or pulmonary hypertension, or; requires outpatient oxygen therapy   | 100      |
|              | FVC of 50- to 64-percent predicted, or, DLCO (SB) of 40- to 55-percent predicted, or, maximum ex-   |          |
|              | ercise capacity of 15 to 20 ml/kg/min oxygen consumption with cardiorespiratory limitation  | 60       |
|              | FVC of 65- to 74-percent predicted, or; DLCO (SB) of 56- to 65-percent predicted  | 30<br>10 |
|              |   | 10       |
|              | Mycotic Lung Disease  |          |
| 6834         | Histoplasmosis of lung.   |          |
| 6835<br>6836 | Coccidioidomycosis. Blastomycosis.  |          |
| 6837         | Cryptococcosis.   |          |
| 6838         | Aspergillosis.  |          |
| 6839         | Mucormycosis.   |          |
|              | General Rating Formula for Mycotic Lung Disease (diagnostic codes 6834 through 6839):  Chronic pulmonary mycosis with persistent fever, weight loss, night sweats, or massive hemoptysis          | 100      |
|              | Chronic pulmonary mycosis requiring suppressive therapy with no more than minimal symptoms  |          |
|              | such as occasional minor hemoptysis or productive cough   | 50       |
|              | Chronic pulmonary mycosis with minimal symptoms such as occasional minor hemoptysis or produc-  | 20       |
|              | tive cough  Healed and inactive mycotic lesions, asymptomatic   | 30<br>0  |
|              | Note: Coccidioidomycosis has an incubation period up to 21 days, and the disseminated phase is ordinarily   |          |
|              | manifest within six months of the primary phase. However, there are instances of dissemination delayed up   |          |
|              | to many years after the initial infection which may have been unrecognized. Accordingly, when service con-  |          |
|              | nection is under consideration in the absence of record or other evidence of the disease in service, service  |          |
|              | in southwestern United States where the disease is endemic and absence of prolonged residence in this lo-<br>cality before or after service will be the deciding factor.                          |          |
|              | Restrictive Lung Disease  |          |
| 6840         | Diaphragm paralysis or paresis.   |          |
| 6841         | Spinal cord injury with respiratory insufficiency.  |          |
| 6842         | Kyphoscoliosis, pectus excavatum, pectus carinatum.   |          |
| 6843<br>6844 | Traumatic chest wall defect, pneumothorax, hernia, etc.   |          |
| 6845         | Post-surgical residual (lobectomy, pneumonectomy, etc.). Chronic pleural effusion or fibrosis.  |          |
|              | General Rating Formula for Restrictive Lung Disease (diagnostic codes 6840 through 6845):   |          |
|              | FEV-1 less than 40 percent of predicted value, or; the ratio of Forced Expiratory Volume in one sec-  |          |
|              | ond to Forced Vital Capacity (FEV-1/FVC) less than 40 percent, or; Diffusion Capacity of the Lung for Carbon Monoxide by the Single Breath Method (DLCO (SB)) less than 40-percent predicted, or; |          |
|              | maximum exercise capacity less than 15 ml/kg/min oxygen consumption (with cardiac or res-   |          |
|              | piratory limitation), or; cor pulmonale (right heart failure), or; right ventricular hypertrophy, or; pul-  |          |
|              | monary hypertension (shown by Echo or cardiac catheterization), or; episode(s) of acute res-  |          |
|              | piratory failure, or; requires outpatient oxygen therapy  | 100      |
|              | FEV-1 of 40- to 55-percent predicted, or; FEV-1/FVC of 40 to 55 percent, or; DLCO (SB) of 40- to  |          |
|              |   |          |
|              | 55-percent predicted, or; maximum oxygen consumption of 15 to 20 ml/kg/min (with cardiorespiratory limit)   | 60       |
|              | 55-percent predicted, or, maximum oxygen consumption of 15 to 20 ml/kg/min (with cardiorespira-   | 60<br>30 |

|      |  | Rating               |
|------|--|----------------------|
|      | FEV-1 of 71- to 80-percent predicted, or; FEV-1/FVC of 71 to 80 percent, or; DLCO (SB) 66- to 80-percent predicted   | 10                   |
|      | Note (1): A 100-percent rating shall be assigned for pleurisy with empyema, with or without pleurocutaneous fistula, until resolved.   |                      |
|      | Note (2): Following episodes of total spontaneous pneumothorax, a rating of 100 percent shall be assigned as of the date of hospital admission and shall continue for three months from the first day of the month after hospital discharge.   |                      |
|      | Note (3): Gunshot wounds of the pleural cavity with bullet or missile retained in lung, pain or discomfort on exertion, or with scattered rales or some limitation of excursion of diaphragm or of lower chest expansion shall be rated at least 20-percent disabling. Disabling injuries of shoulder girdle muscles (Groups I to IV) shall be separately rated and combined with ratings for respiratory involvement. Involvement of Muscle Group XXI (DC 5321), however, will not be separately rated. |                      |
| 6846 | Sarcoidosis:  Cor pulmonale, or; cardiac involvement with congestive heart failure, or; progressive pulmonary disease with fever, night sweats, and weight loss despite treatment.  Pulmonary involvement requiring systemic high dose (therapeutic) corticosteroids for control   | 100<br>60<br>30      |
| 6847 | Chronic hilar adenopathy or stable lung infiltrates without symptoms or physiologic impairment   | 0                    |
| 0047 | Chronic respiratory failure with carbon dioxide retention or cor pulmonale, or; requires tracheostomy  | 100<br>50<br>30<br>0 |

<sup>&</sup>lt;sup>1</sup> Review for entitlement to special monthly compensation under § 3.350 of this chapter.

[61 FR 46728, Sept. 5, 1996, as amended at 71 FR 28586, May 17, 2006]

#### THE CARDIOVASCULAR SYSTEM

#### §4.100 Application of the general rating formula for diseases of the heart.

- (a) Whether or not cardiac hypertrophy or dilatation (documented by electrocardiogram, echocardiogram, or X-ray) is present and whether or not there is a need for continuous medication must be ascertained in all cases.
- (b) Even if the requirement for a 10% (based on the need for continuous medication) or 30% (based on the presence of cardiac hypertrophy or dilatation) evaluation is met, METs testing is required in all cases except:
- (1) When there is a medical contraindication.
- (2) When a 100% evaluation can be assigned on another basis.

(Authority: 38 U.S.C. 1155)

[71 FR 52460, Sept. 6, 2006, as amended at 86 FR 54093, Sept. 30, 2021; 86 FR 67654, Nov. 29, 2021]

#### §§ 4.101-4.103 [Reserved]

#### § 4.104 Schedule of ratings—cardiovascular system.

#### DISEASES OF THE HEART

[Unless otherwise directed, use this general rating formula to evaluate diseases of the heart.]

ing

| Note (1): Evaluate cor pulmonale, which is a form of secondary heart disease, as part of the pulmonary condition that causes it. |     |
|--|-----|
| Note (2): One MET (metabolic equivalent) is the en-  |     |
| ergy cost of standing quietly at rest and represents   |     |
| an oxygen uptake of 3.5 milliliters per kilogram of  |     |
| body weight per minute. When the level of METs   |     |
| at which breathlessness, fatigue, angina, dizziness,   |     |
| or syncope develops is required for evaluation, and  |     |
| a laboratory determination of METs by exercise   |     |
| testing cannot be done for medical reasons, a<br>medical examiner may estimate the level of activity                             |     |
| (expressed in METs and supported by specific ex-   |     |
| amples, such as slow stair climbing or shoveling   |     |
| snow) that results in those symptoms.  |     |
| Note (3): For this general formula, heart failure symp-  |     |
| toms include, but are not limited to, breathless-  |     |
| ness, fatigue, angina, dizziness, arrhythmia, pal-   |     |
| pitations, or syncope.   |     |
| GENERAL RATING FORMULA FOR DISEASES OF   |     |
| THE HEART:   |     |
| Workload of 3.0 METs or less results in  |     |
| heart failure symptoms   | 100 |
| Workload of 3.1-5.0 METs results in heart  |     |

failure symptoms ....

#### **Department of Veterans Affairs**

§ 4.104

#### DISEASES OF THE HEART—Continued

[Unless otherwise directed, use this general rating formula to evaluate diseases of the heart.]

|  | Rat-<br>ing |
|--|-------------|
| Workload of 5.1–7.0 METs results in heart failure symptoms; or evidence of cardiac hypertrophy or dilatation confirmed by echocardiogram or equivalent (e.g., multigated acquisition scan or magnetic resonance imaging)                                 | 30          |
| Workload of 7.1–10.0 METs results in heart failure symptoms; or continuous medication required for control   | 10          |
| <ul><li>7000 Valvular heart disease (including rheumatic<br/>heart disease),</li><li>7001 Endocarditis, or</li></ul>   |             |
| 7002 Pericarditis:  During active infection with cardiac involvement and for three months following cessation of therapy for the active infection  | 100         |
| Thereafter, with diagnosis confirmed by find-<br>ings on physical examination and either<br>echocardiogram, Doppler echocardio-<br>gram, or cardiac catheterization, use the<br>General Rating Formula.  |             |
| <ul><li>7003 Pericardial adhesions.</li><li>7004 Syphilitic heart disease:</li></ul>   |             |
| Note: Evaluate syphilitic aortic aneurysms under DC 7110 (Aortic aneurysm: Ascending, thoracic, abdominal).  |             |
| 7005 Arteriosclerotic heart disease (coronary artery disease).   |             |
| Note: If non-service-connected arteriosclerotic heart disease is superimposed on service-connected val-<br>vular or other non-arteriosclerotic heart disease, request a medical opinion as to which condition is causing the current signs and symptoms. |             |
| 7006 Myocardial infarction:  |             |
| During and for three months following myo-<br>cardial infarction, confirmed by laboratory<br>tests   | 100         |
| Thereafter, use the General Rating Formula.  7007 Hypertensive heart disease.  7008 Hyperthyroid heart disease:  |             |
| Rate under the appropriate cardiovascular diagnostic code, depending on particular findings.   |             |
| For DCs 7009, 7010, 7011, and 7015, a single evaluation will be assigned under the diagnostic code that reflects the predominant disability picture.  7009 Bradycardia (Bradyarrhythmia), symptomatic,   |             |
| requiring permanent pacemaker implantation: For one month following hospital discharge   |             |
| for implantation or re-implantation  | 100         |

sponse; and, idioventricular escape rhythm.

a disability subject to compensation.

7010 Supraventricular tachycardia:

lote (2): Asymptomatic bradycardia (bradyarrhythmia) is a medical finding only. It is not

ment interventions per year ..

Confirmed by ECG, with five or more treat-

DISEASES OF THE HEART—Continued
[Unless otherwise directed, use this general rating formula to evaluate diseases of the heart.]
                                                               Rat-
                                                                ing
          Confirmed by ECG, with one to four treat-
            ment interventions per year; or, confirmed
            by ECG with either continuous use of oral
            medications to control or use of vagal ma-
            neuvers to control .
                                                                   10
Note (1): Examples of supraventricular tachycardia
  include, but are not limited to: Atrial fibrillation,
  atrial flutter, sinus tachycardia, sinoatrial nodal re-
  entrant tachycardia, atrioventricular nodal reentrant
  tachycardia, atrioventricular reentrant tachycardia,
  atrial tachycardia, junctional tachycardia, and multifocal atrial tachycardia.
Note (2): For the purposes of this diagnostic code, a
  treatment intervention occurs whenever a symptomatic patient requires intravenous pharmacologic
  adjustment, cardioversion, and/or
                                            ablation for
  symptom relief.
7011 Ventricular arrhythmias (sustained):
         For an indefinite period from the date of in-
            patient hospital admission for initial med-
            ical therapy for a sustained ventricular ar-
            rhythmia; or, for an indefinite period from
            the date of inpatient hospital admission
            for ventricular aneurysmectomy; or, with an automatic implantable cardioverter-
            defibrillator (AICD) in place .....
Note: When inpatient hospitalization for sustained
  ventricular arrhythmia or ventricular aneurysmectomy is required, a 100-percent eval-
                                                ventricular
  uation begins on the date of hospital admission
  with a mandatory VA examination six months fol-
lowing hospital discharge. Evaluate post-surgical
  residuals under the General Rating Formula. Apply
  the provisions of §3.105(e) of this chapter to any change in evaluation based upon that or any sub-
  sequent examination.
7015 Atrioventricular block:
         Benign (First-Degree and Second-Degree
            Type I):
                   Evaluate under the General Rating
                      Formula.
          Non-Benign (Second-Degree, Type II and
            Third-Degree):
                   Evaluate
                                 under
                                            DC
                                                      7018
                      (implantable
                                       cardiac
                                                     pace-
                      makers).
7016 Heart valve replacement (prosthesis):
          For an indefinite period following date of
            hospital admission for valve replacement
                                                                 100
          Thereafter, use the General Rating Formula,
Note: Six months following discharge from inpatient
  hospitalization, disability evaluation shall be conducted by mandatory VA examination using the General Rating Formula. Apply the provisions of
  §3.105(e) of this chapter to any change in evalua-
  tion based upon that or any subsequent examina-
7017 Coronary bypass surgery:
          For three months following hospital admis-
                                                                 100
            sion for surgery .
          Thereafter, use the General Rating Formula.
7018 Implantable cardiac pacemakers:
         For one month following hospital discharge
            for implantation or re-implantation ......
                                                                 100
          Thereafter:

10

THE DIGESTIVE SYSTEM

#### § 4.110 Ulcers.

Experience has shown that the term "peptic ulcer" is not sufficiently specific for rating purposes. Manifest differences in ulcers of the stomach or duodenum in comparison with those at an anastomotic stoma are sufficiently recognized as to warrant two separate graduated descriptions. In evaluating the ulcer, care should be taken that the findings adequately identify the particular location.

#### § 4.111 Postgastrectomy syndromes.

There are various postgastrectomy symptoms which may occur following anastomotic operations of the stomach. When present, those occurring during or immediately after eating and known as the "dumping syndrome" are characterized by gastrointestinal complaints and generalized symptoms simulating hypoglycemia; those occurring from 1 to 3 hours after eating usually present definite manifestations of hypoglycemia.

#### § 4.112 Weight loss.

For purposes of evaluating conditions in §4.114, the term "substantial weight loss" means a loss of greater than 20 percent of the individual's baseline weight, sustained for three months or longer; and the term "minor weight loss" means a weight loss of 10 to 20 percent of the individual's baseline weight, sustained for three months or longer. The term "inability to gain weight" means that there has been substantial weight loss with inability to regain it despite appropriate therapy. "Baseline weight" means the average weight for the two-year-period preceding onset of the disease.

(Authority: 38 U.S.C. 1155) [66 FR 29488, May 31, 2001]

## § 4.113 Coexisting abdominal conditions.

There are diseases of the digestive system, particularly within the abdomen, which, while differing in the site of pathology, produce a common disability picture characterized in the main by varying degrees of abdominal distress or pain, anemia and disturb-

ances in nutrition. Consequently, certain coexisting diseases in this area, as indicated in the instruction under the title "Diseases of the Digestive System," do not lend themselves to distinct and separate disability evaluations without violating the fundamental principle relating to pyramiding as outlined in §4.14.

## §4.114 Schedule of ratings—digestive system.

Ratings under diagnostic codes 7301 to 7329, inclusive, 7331, 7342, and 7345 to 7348 inclusive will not be combined with each other. A single evaluation will be assigned under the diagnostic code which reflects the predominant disability picture, with elevation to the next higher evaluation where the severity of the overall disability warrants such elevation.

|   | Rat-<br>ing |
|---|-------------|
| 7200 Mouth, injuries of.  |             |

| 7201 Lips, injuries of.   |             |
| Rate as for disfigurement of face.  |             |
| 7202 Tongue, loss of whole or part:   |             |
| With inability to communicate by speech   | 100         |
| One-half or more  | 60          |
| With marked speech impairment   | 30          |
| 7203 Esophagus, stricture of: Permitting passage of liquids only, with marked                 |             |
| impairment of general health  | 80          |
| Severe, permitting liquids only   | 50          |
| Moderate  | 30          |
| 7204 Esophagus, spasm of (cardiospasm).   |             |
| If not amenable to dilation, rate as for the de-  |             |
| gree of obstruction (stricture).  |             |
| 7205 Esophagus, diverticulum of, acquired.  |             |
| Rate as for obstruction (stricture). 7301 Peritoneum, adhesions of:                           |             |
| Severe; definite partial obstruction shown by X-  |             |
| ray, with frequent and prolonged episodes of  |             |
| severe colic distension, nausea or vomiting,  |             |
| following severe peritonitis, ruptured appendix,  |             |
| perforated ulcer, or operation with drainage  | 50          |
| Moderately severe; partial obstruction mani-<br>fested by delayed motility of barium meal and |             |
| less frequent and less prolonged episodes of  |             |
| pain  | 30          |
| Moderate; pulling pain on attempting work or ag-  |             |
| gravated by movements of the body, or occa-   |             |
| sional episodes of colic pain, nausea, con-   |             |
| stipation (perhaps alternating with diarrhea) or  |             |
| abdominal distension  | 10          |
| Note: Ratings for adhesions will be considered  | 0           |
| when there is history of operative or other   |             |
| traumatic or infectious (intraabdominal) proc-  |             |
| ess, and at least two of the following: disturb-  |             |
| ance of motility, actual partial obstruction, re-   |             |
| flex disturbances, presence of pain.  |             |

Ulcer, gastric.

7305 Ulcer duodenal:

|  | Rat-<br>ing |   | Rat-<br>ing |
|--|-------------|---|-------------|
| Severe; pain only partially relieved by standard<br>ulcer therapy, periodic vomiting, recurrent<br>hematemesis or melena, with manifestations<br>of anemia and weight loss productive of defi- |             | Generalized weakness, substantial weight loss,<br>and persistent jaundice, or; with one of the fol-<br>lowing refractory to treatment: ascites, hepatic<br>encephalopathy, hemorrhage from varices or   |             |
| nite impairment of health  | 60          | portal gastropathy (erosive gastritis)  | 10          |
| at least four or more times a year   | 40          | attacks   | 70          |
| days in duration; or with continuous moderate manifestations   | 20          | or portal gastropathy (erosive gastritis)   | 50          |
| yearly   | 10          | and at least minor weight lossSymptoms such as weakness, anorexia, abdom-   | 3           |
| Pronounced; periodic or continuous pain<br>unrelieved by standard ulcer therapy with peri-<br>odic vomiting, recurring melena or<br>hematemesis, and weight loss. Totally inca-                | 100         | inal pain, and malaise  | 10          |
| pacitating Severe; same as pronounced with less pro-<br>nounced and less continuous symptoms with<br>definite impairment of health   | 100         | 7314 Cholecystitis, chronic:  Severe; frequent attacks of gall bladder colic  Moderate; gall bladder dyspepsia, confirmed by  X-ray technique, and with infrequent attacks                              | 3           |
| Moderately severe; intercurrent episodes of ab-<br>dominal pain at least once a month partially or<br>completely relieved by ulcer therapy, mild and   |             | (not over two or three a year) of gall bladder colic, with or without jaundice  | 10          |
| transient episodes of vomiting or melena  Moderate; with episodes of recurring symptoms several times a year   | 40<br>20    | 7315 Cholelithiasis, chronic. Rate as for chronic cholecystitis. 7316 Cholangitis, chronic.   | ,           |
| Mild; with brief episodes of recurring symptoms once or twice yearly   | 10          | Rate as for chronic cholecystitis. 7317 Gall bladder, injury of.  |             |
| 307 Gastritis, hypertrophic (identified by gastroscope):  Chronic; with severe hemorrhages, or large ul-   |             | Rate as for peritoneal adhesions. 7318 Gall bladder, removal of: With severe symptoms   | 3           |
| Chronic; with multiple small eroded or ulcerated   | 60          | With mild symptoms  Nonsymptomatic  Spleen, disease or injury of.   | 1           |
| areas, and symptoms  | 30<br>10    | See Hemic and Lymphatic Systems. 7319 Irritable colon syndrome (spastic colitis, mucous colitis, etc.):   |             |
| Gastritis, atrophic.  A complication of a number of diseases, including pernicious anemia.   |             | Severe; diarrhea, or alternating diarrhea and constipation, with more or less constant abdominal distress   | 3           |
| Rate the underlying condition.  308 Postgastrectomy syndromes:  Severe; associated with nausea, sweating, cir-   |             | Moderate; frequent episodes of bowel disturb-<br>ance with abdominal distress   | 1           |
| culatory disturbance after meals, diarrhea,<br>hypoglycemic symptoms, and weight loss with<br>malnutrition and anemia  | 60          | sional episodes of abdominal distress   |             |
| Moderate; less frequent episodes of epigastric<br>disorders with characteristic mild circulatory<br>symptoms after meals but with diarrhea and   |             | inal cramps, nausea, gaseous distention, chronic constipation interrupted by diarrhea  Asymptomatic   | 1           |
| weight loss  | 40          | NOTE: Amebiasis with or without liver abscess is<br>parallel in symptomatology with ulcerative coli-<br>tis and should be rated on the scale provided<br>for the latter. Similarly, lung abscess due to |             |
| or continuous mild manifestations  | 20          | amebiasis will be rated under the respiratory system schedule, diagnostic code 6809.  7322 Dysentery, bacillary.  |             |
| 310 Stomach, injury of, residuals.  Rate as peritoneal adhesions. 311 Residuals of injury of the liver:  |             | Rate as for ulcerative colitis  7323 Colitis, ulcerative: Pronounced: resulting in marked malnutrition.   |             |
| Depending on the specific residuals, separately evaluate as adhesions of peritoneum (diag-   |             | anemia, and general debility, or with serious complication as liver abscess   | 10          |
| nostic code 7301), cirrhosis of liver (diagnostic code 7312), and chronic liver disease without cirrhosis (diagnostic code 7345).  |             | nutrition, the health only fair during remissions  Moderately severe; with frequent exacerbations  Moderate; with infrequent exacerbations  | 6<br>3      |
| 7312 Cirrhosis of the liver, primary biliary cirrhosis, or cirrhotic phase of sclerosing cholangitis:  |             | 7324 Distomiasis, intestinal or hepatic: Severe symptoms  | 3           |

|  | Rat-<br>ing |   | Ra<br>in |
|--|-------------|---|----------|
| Moderate symptoms  | 10          | Large, postoperative, recurrent, not well sup-        |          |
| Mild or no symptoms  | 0           | ported under ordinary conditions and not read-        |          |
| 25 Enteritis, chronic.   |             | ily reducible, when considered inoperable             |          |
| Rate as for irritable colon syndrome.                                      |             | Small, postoperative recurrent, or unoperated ir-     |          |
| 26 Enterocolitis, chronic.   |             | remediable, not well supported by truss, or not       |          |
| Rate as for irritable colon syndrome.                                      |             | readily reducible                                     |          |
| 27 Diverticulitis.   |             | Postoperative recurrent, readily reducible and        |          |
| Rate as for irritable colon syndrome, peritoneal                           |             | well supported by truss or belt                       |          |
| adhesions, or colitis, ulcerative, depending                               |             | Not operated, but remediable                          |          |
| upon the predominant disability picture.                                   |             | Small, reducible, or without true hernia protru-      |          |
| 28 Intestine, small, resection of:   |             | sion  |          |
| With marked interference with absorption and                               |             | NOTE: Add 10 percent for bilateral involvement,       |          |
| nutrition, manifested by severe impairment of                              |             | provided the second hernia is compensable.            |          |
| health objectively supported by examination                                |             | This means that the more severely disabling           |          |
| findings including material weight loss                                    | 60          | hernia is to be evaluated, and 10 percent,            |          |
| With definite interference with absorption and                             |             |   |          |
| nutrition, manifested by impairment of health                              |             | only, added for the second hernia, if the latter      |          |
| objectively supported by examination findings                              |             | is of compensable degree.                             |          |
| including definite weight loss   | 40          | 7339 Hernia, ventral, postoperative:                  |          |
| Symptomatic with diarrhea, anemia and inability                            |             | Massive, persistent, severe diastasis of recti        |          |
| to gain weight   | 20          | muscles or extensive diffuse destruction or           |          |
| NOTE: Where residual adhesions constitute the                              | -           | weakening of muscular and fascial support of          |          |
| predominant disability, rate under diagnostic                              |             | abdominal wall so as to be inoperable                 |          |
| code 7301.   |             | Large, not well supported by belt under ordinary      |          |
| 29 Intestine, large, resection of:   |             | conditions  |          |

THE GENITOURINARY SYSTEM

#### §4.115 Nephritis.

Albuminuria alone is not nephritis, nor will the presence of transient albumin and casts following acute febrile illness be taken as nephritis. The glomerular type of nephritis is usually preceded by or associated with severe infectious disease; the onset is sudden, and the course marked by red blood cells, salt retention, and edema; it may clear up entirely or progress to a chronic condition. The nephrosclerotic type, originating in hypertension or arteriosclerosis, develops slowly, with minimum laboratory findings, and is associated with natural progress. Separate ratings are not to be assigned for disability from disease of the heart and any form of nephritis, on account of the close interrelationships of cardiovascular disabilities. If, however, absence of a kidney is the sole renal disability, even if removal was required because of nephritis, the absent kidney and any hypertension or heart disease will be separately rated. Also, in the event that chronic renal disease has progressed to the point where regular dialysis is required, any coexisting hypertension or heart disease will be separately rated.

[41 FR 34258, Aug. 13, 1976, as amended at 59 FR 2527, Jan. 18, 1994]

## §4.115a Ratings of the genitourinary system—dysfunctions.

Diseases of the genitourinary system generally result in disabilities related to renal or voiding dysfunctions, infec-

tions, or a combination of these. The following section provides descriptions of various levels of disability in each of these symptom areas. Where diagnostic codes refer the decision maker to these specific areas of dysfunction, only the predominant area of dysfunction shall be considered for rating purposes. Distinct disabilities may be evaluated separately under this section, pursuant to §4.14, if the symptoms do not overlap. Since the areas of dysfunction described below do not cover all symptoms resulting from genitourinary diseases, specific diagnoses may include a description of symptoms assigned to that diagnosis.

|   | Rat-<br>ing |
|---|-------------|
| Renal dysfunction:  |             |
| Chronic kidney disease with glomerular filtration rate (GFR) less than 15 mL/min/ 1.73 m² for at least 3 consecutive months during the past 12 months; or requiring regular routine dialysis; or eligible kidney  |             |
| transplant recipient  | 100         |
| tive months during the past 12 months Chronic kidney disease with GFR from 30 to 44 mL/min/1.73 m <sup>2</sup> for at least 3 consecu-  | 80          |
| tive months during the past 12 months<br>Chronic kidney disease with GFR from 45 to<br>59 mL/min/1.73 m <sup>2</sup> for at least 3 consecu-  | 60          |
| tive months during the past 12 months GFR from 60 to 89 mL/min/1.73 m² and either recurrent red blood cell (RBC) casts, white blood cell (WBC) casts, or granular casts for at least 3 consecutive months during the past 12 months; or GFR from 60 to 89 mL/min/1.73 m² and structural kidney abnormalities (cystic, obstructive, or glomerular) for at least 3 con- | 30          |
| secutive months during the past 12 months; or GFR from 60 to 89 mL/min/1.73 m² and albumin/creatinine ratio (ACR) ≥30 mg/g for at least 3 consecutive months during the past 12 months  | 0           |
| Requiring the use of an appliance or the wearing of absorbent materials which must be changed more than 4 times per day   | 60          |
| Requiring the wearing of absorbent materials which must be changed 2 to 4 times per day Requiring the wearing of absorbent materials  | 40          |
| which must be changed less than 2 times per   | 20          |

| tissue               |            |       |
|                      |            |       |

7627 Malignant neoplasms of gynecological system

Note: A rating of 100 percent shall continue beyond the cessation of any surgical, radiation, antineoplastic chemotherapy or other therapeutic procedures. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter. Rate chronic residuals to include scars, lymphedema, disfigurement, and/or other impairment of function under the appropriate diagnostic code(s) within the appropripriate body system

7628 Benign neoplasms of gynecological system. Rate chronic residuals to include scars, lymphedema, disfigurement, and/or other impairment of function under the appropriate diagnostic code(s) within the appropriate body system

7629 Endometriosis:

Lesions involving bowel or bladder confirmed by laparoscopy, pelvic pain or heavy or irregular bleeding not controlled by treatment, and bowel or bladder symptoms ......

Pelvic pain or heavy or irregular bleeding not controlled by treatment ......

Pelvic pain or heavy or irregular bleeding requiring continuous treatment for control **Note:** Diagnosis of endometriosis must be substantiated by laparoscopy.

7630 Malignant neoplasms of the breast ......

Note: A rating of 100 percent shall continue beyond the cessation of any surgical, radiation, antineoplastic chemotherapy or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter. Rate chronic residuals according to impairment of function due to scars, lymphedema, or disfigurement (e.g., limitation of arm, shoulder, and wrist motion, or loss of grip strength, or loss of sensation, or residuals from harvesting of muscles for reconstructive purposes), and/or under diagnostic code 7626

7631 Benign neoplasms of the breast and other injuries of the breast. Rate chronic residuals according to impairment of function due to scars, lymphedema, or disfigurement (e.g., limitation of arm, shoulder, and wrist motion, or loss of grip strength, or loss of sensation, or residuals from harvesting of muscles for reconstructive purposes), and/or under diagnostic code 7626
7632 Female sexual arousal disorder (FSAD) ......

Note (1): A 100 percent evaluation for bone marrow transplant shall be assigned as of the date of hospital admission and shall continue for six months after hospital discharge with a mandatory VA examination six months following hospital discharge. Any reduction in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter

Note (2): Separately evaluate splenectomy under diagnostic code 7706 and combine with an evaluation under diagnostic code 7723

#### 7724 Solitary plasmacytoma:

Solitary plasmacytoma, when there is active disease or during a treatment phase

Note (1): A 100 percent evaluation shall continue beyond the cessation of any surgical therapy, radiation therapy, antineoplastic chemotherapy, or other therapeutic procedures (including autologous stem cell transplantation). Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter. If there has been no recurrence, rate residuals under the appropriate diagnostic codes

Note (2): Rate a solitary plasmacytoma that has developed into multiple myeloma as symptomatic multiple myeloma

Note (3): Rate residuals of plasma cell dysplasia (e.g., thrombosis) and adverse effects of medical treatment (e.g., neuropathy) under the appropriate diagnostic codes

#### 7725 Myelodysplastic syndromes:

| Requiring peripheral blood or bone | marrow |
|------------------------------------|--------|
| stem cell transplant; or requiring | chemo- |
| therapy                            |        |
|                                    |        |

Note (1): If the condition progresses to leukemia, evaluate as leukemia under diagnostic code 7703 Note (2): A 100 percent evaluation shall be assigned as of the date of hospital admission for

Note (2): A 100 percent evaluation shall be assigned as of the date of hospital admission for peripheral blood or bone marrow stem cell transplant, or during the period of treatment with chemotherapy, and shall continue with a mandatory VA examination six months following hospital discharge or, in the case of chemotherapy treatment, six months after completion of treatment. Any reduction in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter. If there has been no recurrence, residuals will be rated under the appropriate diagnostic codes

[60 FR 49227, Sept. 22, 1995, as amended at 77 FR 6467, Feb. 8, 2012; 79 FR 2100, Jan. 13, 2014; 83 FR 54254, Oct. 29, 2018; 83 FR 54881, Nov. 1, 2018; 87 FR 61248, Oct. 11, 2022]

#### THE SKIN

#### § 4.118 Schedule of ratings—skin.

(a) For the purposes of this section, systemic therapy is treatment that is administered through any route (orally, injection, suppository, intranasally) other than the skin, and topical therapy is treatment that is administered through the skin.

(b) Two or more skin conditions may be combined in accordance with §4.25 only if separate areas of skin are involved. If two or more skin conditions involve the same area of skin, then only the highest evaluation shall be used.

Rating

7800 Burn scar(s) of the head, face, or neck; scar(s) of the head, face, or neck due to other causes; or other disfigurement of the head, face, or neck:

With visible or palpable tissue loss and either gross distortion or asymmetry of three or more features or paired sets of features (nose, chin, forehead, eyes (including eyelids), ears (auricles), cheeks, lips), or; with six or more characteristics of disfigurement

| to a 100-percent evaluation shall apply.  Note (3): Where surgical intervention is not indicated, this evaluation shall continue for six   |             | Four or more crises during the past year  Three crises during the past year, or; five or more episodes during the past year  | 60<br>40  |
| months after pharmacologic treatment begins.<br>After six months, rate on residuals under the<br>appropriate diagnostic code(s) within the appro-<br>priate body system(s) based on a VA examina-<br>tion.   |             | One or two crises during the past year, or; two to four episodes during the past year, or; weakness and fatigability, or; corticosteroid therapy required for control  | 20        |
| Symptoms such as fatigue, anorexia, nausea, or constipation that occur despite surgery; or in individuals who are not candidates for surgery   |             | Note (1): An Addisonian "crisis" consists of the rapid onset of peripheral vascular collapse (with acute hypotension and shock), with findings   |           |
| but require continuous medication for control  Asymptomatic  | 10<br>0     | that may include: anorexia; nausea; vomiting; dehydration; profound weakness; pain in abdomen, legs, and back; fever; apathy, and depressed mentation with possible progression to coma, renal shutdown, and death.  |           |
| function, fractures, vision problems, and cardio-<br>vascular complications, under the appropriate<br>diagnostic codes.  |             | Note (2): An Addisonian "episode," for VA pur-<br>poses, is a less acute and less severe event<br>than an Addisonian crisis and may consist of<br>anorexia, nausea, vomiting, diarrhea, dehydra-   |           |
| 7905 Hypoparathyroidism:<br>For three months after initial diagnosis   | 100         | tion, weakness, malaise, orthostatic hypo-<br>tension, or hypoglycemia, but no peripheral<br>vascular collapse.<br>Note (3): Tuberculous Addison's disease will be   |           |
| creased renal function, and congestive heart failure under the appropriate diagnostic codes.  7906 Thyroiditis:  |             | evaluated as active or inactive tuberculosis. If inactive, these evaluations are not to be combined with the graduated ratings of 50 percent   |           |
| With normal thyroid function (euthyroid)   | 0           | or 30 percent for non-pulmonary tuberculosis specified under §4.88b. Assign the higher rating.   |           |
| hypothyroidism, evaluate as hypothyroidism (DC 7903).  7907 Cushing's syndrome:  As active, progressive disease, including areas of osteoporosis, hypertension, and proximal upper and lower extremity muscle wasting that results   |             | <ul> <li>7912 Polyglandular syndrome (multiple endocrine neoplasia, autoimmune polyglandular syndrome):</li> <li>Evaluate according to major manifestations to include, but not limited to, Type I diabetes mellitus, hyperthyroidism, hypothyroidism, hypoparathyroidism, or Addison's disease.</li> <li>7913 Diabetes mellitus:</li> </ul> |           |
| in inability to rise from squatting position, climb<br>stairs, rise from a deep chair without assist-<br>ance, or raise arms   | 100         | 7919 Diabetes Hielitus.  | ı         |

Requiring more than one daily injection of insulin, restricted diet, and regulation of activities (avoidance of strenuous occupational and recreational activities) with episodes of ketoacidosis or hypoglycemic reactions requiring at least three hospitalizations per year or weekly visits to a diabetic care provider, plus either progressive loss of weight and strength or complications that would be compensable if separately evaluated

Requiring one or more daily injection of insulin, restricted diet, and regulation of activities with episodes of ketoacidosis or hypoglycemic reac-

ing

4٥

10

restricted diet, and regulation of activities ......... Requiring one or more daily injection of insulin and restricted diet, or; oral hypoglycemic agent and restricted diet .....

Manageable by restricted diet only .....

Note (1): Evaluate compensable complications of diabetes separately unless they are part of the criteria used to support a 100-percent evaluation. Noncompensable complications are considered part of the diabetic process under DC 7012

Note (2): When diabetes mellitus has been conclusively diagnosed, do not request a glucose tolerance test solely for rating purposes.

7914 Neoplasm, malignant, any specified part of the endocrine system

NOTE: A rating of 100 percent shall continue beyond the cessation of any surgical, X-ray, antineoplastic chemotherapy or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter. If there has been no local recurrence or metastasis, rate on residu-

7915 Neoplasm, benign, any specified part of the endocrine system:

Rate as residuals of endocrine dysfunction.

7916 Hyperpituitarism (prolactin secreting pituitary dysfunction):

Note: Evaluate as malignant or benign neoplasm, as appropriate.

7917 Hyperaldosteronism (benign or malignant):

Note: Evaluate as malignant or benign neoplasm, as appropriate.

7918 Pheochromocytoma (benign or malignant): Note: Evaluate as malignant or benign neoplasm as appropriate.

7919 C-cell hyperplasia of the thyroid:

If antineoplastic therapy is required, evaluate as a malignant neoplasm under DC 7914. If a prophylactic thyroidectomy is performed (based upon genetic testing) and antineoplastic therapy is not required, evaluate as hypothyroidism under DC 7903.

[61 FR 20446, May 7, 1996, as amended at 82 FR 50804, Nov. 2, 2017]

NEUROLOGICAL CONDITIONS AND CONVULSIVE DISORDERS

#### § 4.120 Evaluations by comparison.

Disability in this field is ordinarily to be rated in proportion to the impairment of motor, sensory or mental function. Consider especially psychotic manifestations, complete or partial loss of use of one or more extremities, speech disturbances, impairment of vision, disturbances of gait, tremors, visceral manifestations, injury to the skull, etc. In rating disability from the conditions in the preceding sentence refer to the appropriate schedule. In rating peripheral nerve injuries and their residuals, attention should be given to the site and character of the injury, the relative impairment in motor function, trophic changes, or sensory disturbances.

#### § 4.121 Identification of epilepsy.

When there is doubt as to the true nature of epileptiform attacks, neurological observation in a hospital adequate to make such a study is necessary. To warrant a rating for epilepsy, the seizures must be witnessed or verified at some time by a physician. As to frequency, competent, consistent lay testimony emphasizing convulsive and immediate post-convulsive characteristics may be accepted. The frequency of seizures should be ascertained under the ordinary conditions of life (while not hospitalized).

#### § 4.122 Psychomotor epilepsy.

The term psychomotor epilepsy refers to a condition that is characterized by seizures and not uncommonly by a chronic psychiatric disturbance as well.

(a) Psychomotor seizures consist of episodic alterations in conscious control that may be associated with automatic states, generalized convulsions, random motor movements (chewing, lip smacking, fumbling), hallucinatory phenomena (involving taste, smell, sound, vision), perceptual illusions (deja vu, feelings of loneliness, strangeness, macropsia, micropsia, dreamy states), alterations in thinking (not open to reason), alterations in memory, abnormalities of mood or affect (fear, alarm, terror, anger, dread, well-

being), and autonomic disturbances (sweating, pallor, flushing of the face, visceral phenomena such as nausea. vomiting, defecation, a rising feeling of warmth in the abdomen). Automatic states or automatisms are characterized by episodes of irrational, irrelevant, disjointed, unconventional, asocial, purposeless though seemingly coordinated and purposeful, confused or inappropriate activity of one to several minutes (or, infrequently, hours) duration with subsequent amnesia for the seizure. Examples: A person of high social standing remained seated, muttered angrily, and rubbed the arms of his chair while the National Anthem was being played; an apparently normal person suddenly disrobed in public; a man traded an expensive automobile for an antiquated automobile in poor mechanical condition and after regaining conscious control, discovered that he had signed an agreement to pay an additional sum of money in the trade. The seizure manifestations of psychomotor epilepsy vary from patient to patient and in the same patient from seizure to seizure.

(b) A chronic mental disorder is not uncommon as an interseizure manifestation of psychomotor epilepsy and may include psychiatric disturbances extending from minimal anxiety to severe personality disorder (as distinguished from developmental) or almost complete personality disintegration (psychosis). The manifestations of a chronic mental disorder associated with psychomotor epilepsy, like those of the seizures, are protean in character.

#### §4.123 Neuritis, cranial or peripheral.

Neuritis, cranial or peripheral, characterized by loss of reflexes, muscle atrophy, sensory disturbances, and constant pain, at times excruciating, is to be rated on the scale provided for injury of the nerve involved, with a maximum equal to severe, incomplete, paralysis. See nerve involved for diagnostic code number and rating. The maximum rating which may be assigned for neuritis not characterized by organic changes referred to in this section will be that for moderate, or with sciatic nerve involvement, for moderately severe, incomplete paralysis.

## §4.124 Neuralgia, cranial or peripheral.

Neuralgia, cranial or peripheral, characterized usually by a dull and intermittent pain, of typical distribution so as to identify the nerve, is to be rated on the same scale, with a maximum equal to moderate incomplete paralysis. See nerve involved for diagnostic code number and rating. Tic douloureux, or trifacial neuralgia, may be rated up to complete paralysis of the affected nerve.

#### §4.124a Schedule of ratings—neurological conditions and convulsive disorders.

[With the exceptions noted, disability from the following diseases and their residuals may be rated from 10 percent to 100 percent in proportion to the impairment of motor, sensory, or mental function. Consider especially psychotic manifestations, complete or partial loss of use of one or more extremities, speech disturbances, impairment of vision, disturbances of gait, tremors, visceral manifestations, etc., referring to the appropriate bodily system of the schedule. With partial loss of use of one or more extremities from neurological lesions, rate by comparison with the mild, moderate, severe, or complete paralysis of peripheral nerves]

| tion may require evaluation  |             |  |            |

§4.124a

ing

## ORGANIC DISEASES OF THE CENTRAL NERVOUS SYSTEM—Continued

ing

|--|

The preceding list of types of physical dysfunction does not encompass all possible residuals of TBI. For residuals not listed here that are reported on an examination, evaluate under the most appropriate diagnostic code. Evaluate each condition separately, as long as the same signs and symptoms are not used to support more than one evaluation, and combine under § 4.25 the evaluations for each separately rated condition. The evaluation assigned based on the "Evaluation of Cognitive Impairment and Other Residuals of TBI Not Otherwise Classified" table will be considered the evaluation for a single condition for purposes of combining with other disability evaluations.

Consider the need for special monthly compensation for such problems as loss of use of an extremity, certain sensory impairments, erectile dysfunction, the need for aid and attendance (including for protection from hazards or dangers incident to the daily environment due to cognitive impairment), being housebound, etc.

#### Evaluation of Cognitive Impairment and Subjective Symptoms

The table titled "Evaluation of Cognitive Impairment and Other Residuals of TBI Not Otherwise Classified" contains 10 important facets of TBI related to cognitive impairment and subjective symptoms. It provides criteria for levels of impairment for each facet, as appropriate, ranging from 0 to 3, and a 5th level, the highest level of impairment, labeled "total." However, not every facet has every level of severity. The Consciousness facet, for example, does not provide for an impairment level other than "total," since any level of impaired consciousness would be totally disabling. Assign a 100-percent evaluation if "total" is the level of evaluation for one or more facets. If no facet is evaluated as "total," assign the overall percentage evaluation based on the level of the highest facet as follows: 0 = 0 percent; 1 = 10 percent; 2 = 40 percent; and 3 = 70 percent. For example, assign a 70 percent evaluation if 3 is the highest level of evaluation for any facet.

Note (1): There may be an overlap of manifestations of conditions evaluated under the table titled "Evaluation Of Cognitive Impairment And Other Residuals Of TBI Not Otherwise Classified" with manifestations of a comorbid mental or neurologic or other physical disorder that can be separately evaluated under another diagnostic code. In such cases, do not assign more than one evaluation based on the same manifestations. If the manifestations of two or more conditions cannot be clearly separated, assign a single evaluation under whichever set of diagnostic criteria allows the better assessment of overall impaired functioning due to both conditions. However, if the manifestations are clearly separable, assign a separate evaluation for each condition.

Note (2): Symptoms listed as examples at certain evaluation levels in the table are only examples and are not symptoms that must be present in order to assign a particular evaluation..

ORGANIC DISEASES OF THE CENTRAL NERVOUS

Note (3): "Instrumental activities of daily living" refers to activities other than self-care that are needed for independent living, such as meal preparation, doing housework and other chores, shopping, traveling, doing laundry, being responsible for one's own medications, and using a telephone. These activities are distinguished from "Activities of daily living," which refers to basic self-care and includes bathing or showering, dressing, eating, getting in or out of bed or a chair, and using the toilet.

Note (4): The terms "mild," "moderate," and "severe" TBI, which may appear in medical records, refer to a classification of TBI made at, or close to, the time of injury rather than to the current level of functioning. This classification does not affect the rating assigned under diagnostic code

Note (5): A veteran whose residuals of TBI are rated under a version of §4.124a, diagnostic code 8045, in effect before October 23, 2008 may request review under diagnostic code 8045, irrespective of whether his or her disability has worsened since the last review. VA will review that veteran's disability rating to determine whether the veteran may be entitled to a higher disability rating under diagnostic code 8045. A request for review pursuant to this note will be treated as a claim for an increased rating for purposes of determining the effective date of an increased rating awarded as a result of such review however, in no case will the award be effective before October 23, 2008. For the purposes of determining the effective date of an increased rating awarded as a result of such review, VA will apply 38 CFR 3.114, if applicable.

8046 Cerebral arteriosclerosis:

## 38 CFR Ch. I (7-1-23 Edition)

## §4.124a

# ORGANIC DISEASES OF THE CENTRAL NERVOUS SYSTEM—Continued

|  | Rat-<br>ing |
|--|-------------|
| Purely neurological disabilities, such as hemiplegia, cranial nerve paralysis, etc., due to cerebral arteriosclerosis will be rated under the diagnostic codes dealing with such specific disabilities, with citation of a hyphenated diagnostic code (e.g., 8046–8207).  Purely subjective complaints such as headache, dizziness, tinnitus, insomnia and irritability, recognized as symptomatic of a properly diagnosed cerebral arteriosclerosis, will be rated 10 percent and no more under diagnostic code 9305. This 10 percent rating will not be combined with any other rating for a disability due to cerebral or generalized arteriosclerosis. Ratings in excess of 10 percent for cerebral arteriosclerosis under diagnostic code 9305 are not assignable in the absence of a diagnosis of multi-infarct dementia with cerebral arteriosclerosis.  NOTE: The ratings under code 8046 apply only when the diagnosis of cerebral arteriosclerosis is substantiated by the entire clinical picture and not solely on findings of retinal arteriosclerosis. |             |

# EVALUATION OF COGNITIVE IMPAIRMENT AND OTHER RESIDUALS OF TBI NOT OTHERWISE CLASSIFIED

Mental Disorders in Epilepsies: A nonpsychotic organic brain syndrome will be rated separately under the appropriate diagnostic code (e.g., 9304 or 9326). In the absence of a diagnosis of non-psychotic organic psychiatric disturbance (psychotic, psychoneurotic or personality disorder) if diagnosed and shown to be secondary to or directly associated with epilepsy will be rated separately. The psychotic or psychroneurotic disorder will be rated under the appropriate diagnostic code. The personality disorder will be rated as a dementia (e.g., diagnostic code 9304 or 9326).

Epilepsy and Unemployability: (1) Rating specialists must bear in mind that the epileptic, although his or her seizures are controlled, may find employment and rehabilitation difficult of attainment due to employer reluctance to the hiring of the

(2) Where a case is encountered with a definite history of unemployment, full and complete development should be un-dertaken to ascertain whether the epilepsy is the determining factor in his or her inability to obtain employment.

(3) The assent of the claimant should first be obtained for

op/me assent of the chainfail should his be obtained by open some of this survey. The purpose of this survey is to secure all the relevant facts and data necessary to permit of a true judgment as to the reason for his or her unemployment and should include information

(a) Education;
(b) Occupations prior and subsequent to service;
(c) Places of employment and reasons for termination;
(d) Wages received;
(e) Number of seizures.
(4) Upon completion of this survey and current examination, the case should have rating board consideration. Where in the judgment of the rating board the veteran's unemployability is due to epilepsy and jurisdiction is not vested in that body by reason of schedular evaluations, the case should be submitted to the Compensation Service or the Director, Pension and Fiduciary Service. and Fiduciary Service.

#### MENTAL DISORDERS

#### § 4.125 Diagnosis of mental disorders.

(a) If the diagnosis of a mental disorder does not conform to DSM-5 or is not supported by the findings on the examination report, the rating agency shall return the report to the examiner to substantiate the diagnosis. Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5), American Psychiatric Association (2013), is incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, the Department of Veterans Affairs must publish notice of change in the FEDERAL REGISTER and the material must be available to the public. All approved material is available from the American Psychiatric Association, 1000 Wilson Boulevard, Suite 1825, Arlington, VA 22209-3901, 703-907-7300, http://www.dsm5.org. It is also available for inspection at the Office of Regulation Policy and Management, Department of Veterans Affairs, 810 Vermont Avenue NW., Room 1068,

Washington, DC 20420. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this information at NARA, call 202–741–6030 or go to http://www.archives.gov/federal register/ code of federal regulations/ ibr publications.html.

(b) If the diagnosis of a mental disorder is changed, the rating agency shall determine whether the new diagnosis represents progression of the prior diagnosis, correction of an error in the prior diagnosis, or development of a new and separate condition. If it is not clear from the available records what the change of diagnosis represents, the rating agency shall return the report to the examiner for a determination.

(Authority: 38 U.S.C. 1155)

[61 FR 52700, Oct. 8, 1996, as amended at 79 FR 45099, Aug. 4, 2014]

#### §4.126 Evaluation of disability from mental disorders.

- (a) When evaluating a mental disorder, the rating agency shall consider the frequency, severity, and duration of psychiatric symptoms, the length of remissions, and the veteran's capacity for adjustment during periods of remission. The rating agency shall assign an evaluation based on all the evidence of record that bears on occupational and social impairment rather than solely on the examiner's assessment of the level of disability at the moment of the examination.
- (b) When evaluating the level of disability from a mental disorder, the rating agency will consider the extent of social impairment, but shall not assign an evaluation solely on the basis of social impairment.
- (c) Neurocognitive disorders shall be evaluated under the general rating formula for mental disorders; neurologic deficits or other impairments stemming from the same etiology (e.g., a head injury) shall be evaluated separately and combined with the evaluation for neurocognitive disorders (see § 4.25).
- (d) When a single disability has been diagnosed both as a physical condition and as a mental disorder, the rating

agency shall evaluate it using a diagnostic code which represents the dominant (more disabling) aspect of the condition (see § 4.14).

(Authority: 38 U.S.C. 1155)

[61 FR 52700, Oct. 8, 1996, as amended at 79 FR 45099, Aug. 4, 2014]

#### §4.127 Intellectual disability (intellectual developmental disorder) and personality disorders.

Intellectual disability (intellectual developmental disorder) and personality disorders are not diseases or injuries for compensation purposes, and, except as provided in §3.310(a) of this chapter, disability resulting from them may not be service-connected. However, disability resulting from a mental disorder that is superimposed upon intellectual disability (intellectual developmental disorder) or a personality disorder may be service-connected.

(Authority: 38 U.S.C. 1155) [79 FR 45100, Aug. 4, 2014]

#### § 4.128 Convalescence ratings following extended hospitalization.

If a mental disorder has been assigned a total evaluation due to a continuous period of hospitalization lasting six months or more, the rating agency shall continue the total evaluation indefinitely and schedule a mandatory examination six months after the veteran is discharged or released to nonbed care. A change in evaluation based on that or any subsequent examination shall be subject to the provisions of §3.105(e) of this chapter.

(Authority: 38 U.S.C. 1155) [61 FR 52700, Oct. 8, 1996]

#### §4.129 Mental disorders due to traumatic stress.

When a mental disorder that develops in service as a result of a highly stressful event is severe enough to bring about the veteran's release from active military service, the rating agency shall assign an evaluation of not less than 50 percent and schedule an examination within the six month period following the veteran's discharge to determine whether a change in evaluation is warranted.

(Authority: 38 U.S.C. 1155) [61 FR 52700, Oct. 8, 1996]

#### §4.130 Schedule of ratings-Mental disorders.

The nomenclature employed in this portion of the rating schedule is based upon the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) (see §4.125 for availability information). Rating agencies must be thoroughly familiar with this manual to properly implement the directives in §4.125 through §4.129 and to apply the general rating formula for mental disorders in §4.130. The schedule for rating for mental disorders is set forth as follows:

```
9201
     Schizophrenia
```

Delusional disorder

Other specified and unspecified schizophrenia spectrum and other psychotic disorders

9211 Schizoaffective disorder

#### Delirium

9301 Major or mild neurocognitive disorder due to HIV or other infections

9304 Major or mild neurocognitive disorder due to traumatic brain injury

9305 Major or mild vascular neurocognitive disorder

9310 Unspecified neurocognitive disorder

9312 Major or mild neurocognitive disorder due to Alzheimer's disease

9326 Major or mild neurocognitive disorder due to another medical condition or substance/medication-induced major or mild neurocognitive disorder

9327 [Removed]

9400 Generalized anxiety disorder

9403 Specific phobia; social anxiety disorder (social phobia)

9404 Obsessive compulsive disorder

9410 Other specified anxiety disorder 9411 Posttraumatic stress disorder

Panic disorder and/or agoraphobia 9412

Unspecified anxiety disorder

identity disorder
7 Deport dissociative 9416 Dissociative

9417 Depersonalization/Derealization disorder

9421 Somatic symptom disorder

Other specified somatic symptom and related disorder

9423 Unspecified somatic symptom and related disorder

<sup>9202</sup> [Removed]

<sup>9203</sup> [Removed] [Removed]

<sup>[</sup>Removed]

§4.130

9424 Conversion disorder (functional neurological symptom disorder) 9438 Persistent depressive disorder 9425 Illness anxiety disorder 9434 Major depressive disorder 9431 Cyclothymic disorder 9435 Unspecified depressive disorder 9432 Bipolar disorder 9440 Chronic adjustment disorder

#### GENERAL RATING FORMULA FOR MENTAL DISORDERS

|  | Rating |
|--|--------|
| Total occupational and social impairment, due to such symptoms as: gross impairment in thought processes or communication; persistent delusions or hallucinations; grossly inappropriate behavior; persistent danger of hurting self or others; intermittent inability to perform activities of daily living (including maintenance of minimal personal hygiene); disorientation to time or place; memory loss for names of close relatives, own occupation, or own name.  Occupational and social impairment, with deficiencies in most areas, such as work, school, family relations, judg-                              | 100    |
| ment, thinking, or mood, due to such symptoms as: suicidal ideation; obsessional rituals which interfere with rou-<br>tine activities; speech intermittently illogical, obscure, or irrelevant; near-continuous panic or depression affecting<br>the ability to function independently, appropriately and effectively; impaired impulse control (such as unprovoked<br>irritability with periods of violence); spatial disorientation; neglect of personal appearance and hygiene; difficulty in<br>adapting to stressful circumstances (including work or a worklike setting); inability to establish and maintain effec- |        |
| tive relationships.  Occupational and social impairment with reduced reliability and productivity due to such symptoms as: flattened af-   | 70     |
| fect; circumstantial, circumlocutory, or stereotyped speech; panic attacks more than once a week; difficulty in understanding complex commands; impairment of short- and long-term memory (e.g., retention of only highly learned material, forgetting to complete tasks); impairmed judgment; impaired abstract thinking; disturbances of motivation and mood; difficulty in establishing and maintaining effective work and social relationships.  | 50     |
| Occupational and social impairment with occasional decrease in work efficiency and intermittent periods of inability to perform occupational tasks (although generally functioning satisfactorily, with routine behavior, self-care, and conversation normal), due to such symptoms as: depressed mood, anxiety, suspiciousness, panic attacks (weekly   | 20     |
| or less often), chronic sleep impairment, mild memory loss (such as forgetting names, directions, recent events).  Occupational and social impairment due to mild or transient symptoms which decrease work efficiency and ability to perform occupational tasks only during periods of significant stress, or symptoms controlled by continuous medication.   | 30     |
| A mental condition has been formally diagnosed, but symptoms are not severe enough either to interfere with occu-  |        |
| pational and social functioning or to require continuous medication.   | 0      |

9520 Anorexia nervosa 9521 Bulimia nervosa

#### RATING FORMULA FOR EATING DISORDERS

|   | Rating |
|---|--------|
| Self-induced weight loss to less than 80 percent of expected minimum weight, with incapacitating episodes of at   |        |
| least six weeks total duration per year, and requiring hospitalization more than twice a year for parenteral nutrition or tube feeding.   | 100    |
| Self-induced weight loss to less than 85 percent of expected minimum weight with incapacitating episodes of six or  | 100    |
| more weeks total duration per year.   | 60     |
| Self-induced weight loss to less than 85 percent of expected minimum weight with incapacitating episodes of more than two but less than six weeks total duration per year.  | 30     |
| Binge eating followed by self-induced vomiting or other measures to prevent weight gain, or resistance to weight gain even when below expected minimum weight, with diagnosis of an eating disorder and incapacitating episodes of up to two weeks total duration per year. | 10     |
| Binge eating followed by self-induced vomiting or other measures to prevent weight gain, or resistance to weight  |        |
| gain even when below expected minimum weight, with diagnosis of an eating disorder but without incapacitating   |        |
| episodes.   | 0      |

Note 1: An incapacitating episode is a period during which bed rest and treatment by a physician are required.

Note 2: Ratings under diagnostic codes 9201 to 9440 will be evaluated using the General Rating Formula for Mental Disorders. Ratings under diagnostic codes 9520 and 9521 will be evaluated using the General Rating Formula for Eating Disorders.

#### APPENDIX B TO PART 4—NUMERICAL INDEX OF DISABILITIES

| Diagnostic Code No.   |   |  |  |  |
|---|---|--|--|--|
| THE MUSCULOSKELETAL SYSTEM Acute, Subacute, or Chronic Diseases |   |  |  |  |
| 5000  | Osteomyelitis, acute, subacute, or chronic.   |  |  |  |
| 5001  | Bones and Joints, tuberculosis.   |  |  |  |
| 5002  | Multi-joint arthritis (except post-traumatic and gout), 2 or more joints, as an active process. |  |  |  |
| 5003  | Degenerative arthritis, other than post-traumatic.  |  |  |  |
| 5004  | Arthritis, gonorrheal.  |  |  |  |
| 5005  | Arthritis, pneumococcic.  |  |  |  |
| 5006  | Arthritis, typhoid.   |  |  |  |
| 5007  | Arthritis, syphilitic.  |  |  |  |
| 5008  | Arthritis, streptococcic.   |  |  |  |
| 5009  | Other specified forms of arthropathy (excluding gout).  |  |  |  |
| 5010  | Post-traumatic arthritis.   |  |  |  |
| 5011  | Decompression illness.  |  |  |  |
| 5012  | Bones, neoplasm, malignant, primary or secondary.   |  |  |  |
| 5013  | Osteoporosis, residuals of.   |  |  |  |
| 5014  | Osteomalacia, residuals of.   |  |  |  |
| 5015  | Bones, neoplasm, benign.  |  |  |  |
| 5016  | Osteitis deformans.   |  |  |  |
| 5017  | Gout.   |  |  |  |
| 5018  | [Removed]   |  |  |  |
| 5019  | Bursitis.   |  |  |  |
| 5020  | [Removed]   |  |  |  |
| 5021  | Myositis.   |  |  |  |
| 5022  | [Removed]   |  |  |  |
| 5023  | Heterotopic ossification.   |  |  |  |
| 5024  | Tenosynovitis, tendinitis, tendinosis or tendinopathy.  |  |  |  |
| 5025  | Fibromyalgia.   |  |  |  |
|   | Prosthetic Implants   |  |  |  |
| 5051  | Shoulder replacement (prosthesis).  |  |  |  |
| 5052  | Elbow replacement (prosthesis).   |  |  |  |
| 5053  | Wrist replacement (prosthesis).   |  |  |  |
| 5054  | Hip, resurfacing or replacement (prosthesis).   |  |  |  |
| 5055  | Knee, resurfacing or replacement (prosthesis).  |  |  |  |
| 5056  | Ankle replacement (prosthesis).   |  |  |  |
| Combination of Disabilities                                     |   |  |  |  |
| 5104  | Anatomical loss of one hand and loss of use of one foot.  |  |  |  |
| 5105  | Anatomical loss of one foot and loss of use of one hand.  |  |  |  |
| 5106  | Anatomical loss of both hands.  |  |  |  |
| 5107  | Anatomical loss of both feet.   |  |  |  |
| 5108  | Anatomical loss of one hand and one foot.   |  |  |  |
| 5109  | Loss of use of both hands.  |  |  |  |
| 5110  | Loss of use of both feet.   |  |  |  |
| 5111  | Loss of use of one hand and one foot.   |  |  |  |

# Pt. 4, App. B

| Diagnostic Code No. |  |
|---------------------|--|
| 7009                | Bradycardia (Bradyarrhythmia), symptomatic, requiring permanent pacemaker implantation |
| 7010                | Supraventricular tachycardia.  |
| 7011                | Ventricular arrhythmias.   |
| 7015                | Atrioventricular block.  |
| 016                 | Heart valve replacement.   |
| 017                 | Coronary bypass surgery.   |
| 018                 | Implantable cardiac pacemakers.  |
| 019                 | Cardiac transplantation.   |
| 020                 | Cardiomyopathy.  |

#### Diseases of the Arteries and Veins

| 7101 | Hypertensive vascular disease.  |
|------|---|
| 7110 | Aortic aneurysm: ascending, thoracic, abdominal.                          |
| 7111 | Aneurysm, large artery.   |
| 7112 | Aneurysm, small artery.   |
| 7113 | Arteriovenous fistula, traumatic.   |
| 7114 | Peripheral arterial disease.  |
| 7115 | Thrombo-angiitis obliterans (Buerger's Disease).                          |
| 7117 | Raynaud's syndrome (secondary Raynaud's phenomenon, secondary Raynaud's). |
| 7118 | Angioneurotic edema.  |
| 7119 | Erythromelalgia.  |
| 7120 | Varicose veins.   |
| 7121 | Post-phlebitic syndrome.  |
| 7122 | Cold injury residuals.  |
| 7123 | Soft tissue sarcoma.  |
| 7124 | Raynaud's disease (primary Raynaud's).                                    |

#### THE DIGESTIVE SYSTEM

| 7200 | Mouth, injuries.                    |
|------|-------------------------------------|
| 7201 | Lips, injuries.                     |
| 7202 | Tongue, loss.                       |
| 7203 | Esophagus, stricture.               |
| 7204 | Esophagus, spasm.                   |
| 7205 | Esophagus, diverticulum.            |
| 7301 | Peritoneum, adhesions.              |
| 7304 | Ulcer, gastric.                     |
| 7305 | Ulcer, duodenal.                    |
| 7306 | Ulcer, marginal.                    |
| 7307 | Gastritis, hypertrophic.            |
| 7308 | Postgastrectomy syndromes.          |
| 7309 | Stomach, stenosis.                  |
| 7310 | Stomach, injury of, residuals.      |
| 7311 | Liver, injury of, residuals.        |
| 7312 | Liver, cirrhosis.                   |
| 7314 | Cholecystitis, chronic.             |
| 7315 | Cholelithiasis, chronic.            |
| 7316 | Cholangitis, chronic.               |
| 7317 | Gall bladder, injury.               |
| 7318 | Gall bladder, removal.              |
| 7319 | Colon, irritable syndrome.          |
| 7321 | Amebiasis.                          |
| 7322 | Dysentery, bacillary.               |
| 7323 | Colitis, ulcerative.                |
| 7324 | Distomiasis, intestinal or hepatic. |
| 7325 | Enteritis, chronic.                 |
| 7326 | Enterocolitis, chronic.             |
| 7327 | Diverticulitis.                     |
| 7328 | Intestine, small, resection.        |
| 7329 | Intestine, large, resection.        |
| 7330 | Intestine, fistula.                 |
| 7331 | Peritonitis.                        |
| 7332 | Rectum & anus, impairment.          |
| 7333 | Rectum & anus, stricture.           |
| 7334 | Rectum, prolapse.                   |
| 7335 | Ano, fistula in.                    |
| 7336 | Hemorrhoids.                        |
| 7337 | Pruritus ani.                       |
| 7338 | Hernia, inguinal.                   |
| 7339 | Hernia, ventral, postoperative.     |
| 7340 | Hernia, femoral.                    |
| 7342 | Visceroptosis.                      |
| 7343 | Neoplasms, malignant.               |

#### PART 5—ADMINISTRATIVE PROCE-DURES: GUIDANCE DOCUMENTS

Sec.

- 5.0 Purpose.
- 5.10 Definitions relating to guidance documents.
- 5.15 Procedures for issuing guidance documents.
- 5.20 Procedures for petition for the withdrawal or modification of a guidance document
- 5.25 Guidance website.

AUTHORITY: 38 U.S.C. 501; E.O. 12866, 58 FR 51735, 3 CFR, 1993 Comp., p. 638.

SOURCE: 85 FR 72570, Nov. 13, 2020, unless otherwise noted.

#### §5.0 Purpose.

This part provides the Department of Veterans Affairs' (VA's) processes and procedures for issuing and managing guidance documents.

[86 FR 30184, June 7, 2021]

# §5.10 Definitions relating to guidance documents.

The following definitions apply to §§ 5.0 through 5.25.

Guidance document means an agency statement of general applicability (i.e., it applies to more than just one person, event, or transaction), that is intended to have a future effect on the behavior or actions of regulated parties (to include non-VA actors), and that sets forth a policy on a statutory, regulatory, or technical issue, or an interpretation of a statute or regulation. A guidance document does not include the following:

- (1) Rules promulgated pursuant to notice and comment under section 553 of title 5, United States Code, or similar statutory provisions:
- (2) Rules exempt from rulemaking requirements under section 553(a) of title 5, United States Code;
- (3) Rules of agency organization, procedure, or practice;
- (4) Decisions of agency adjudications under section 554 of title 5, United
